Edmonton Man Killed on Highway Saturday Night

C. P. WINKLE KILLED

Death which struck from behind as he was walking north on the highway one mile from Lacombe at 9:00 p.m. Saturday, claimed the life of Charles Paul Winkle, 26, recently appointed branch manager of a Safeway Store, Edmonton, who was brough from Ponoka branch to be made manager 3 months ago and was married five weeks ago, was almost instantly killed when he was hit by a car driven by Jack Burton of the Lacombe district.

Reports of the accident state that Winkle was walking north on the highway, waiting, it is believed for a traveller employed by the same company to pick him up and convey him to Edmonton. He had been at Rocky Mountain House with his bride of a few weeks on a short vacation.

It was stated that Winkle was supposed to meet a traveller in Lacombe, but that the two missed connections and Winkle set out on foot, expecting to be picked up along the road.

When he reached a point about a mile from town, reports state, a car driven by A. E. Saunders of Wiaugh, Alberta, approached from the north. Burton's car came up from behind at the same time, and it is believed that in efforts to avoid striking Saunders' car Burton swerved his own machine, striking Winkle with the right front fender and hurling him up and over so that his head struck the steel window frame on the front door of the car. The frame was dented by the impact and the glass in the door was broken.

Winkle received a fractured skull and was dead before he reached the Lacombe hospital, where he was conveyed by Saunders.

R.C.M.P. detachment from Red Deer investigated the accident after the Lacombe police had visited the scene. It was stated an inquest would be held on Saturday next, August 25.

Saunder is reported to have told police that he saw Winkle struck just as the two cars passed.

Winkle, according to his employers, was one of the most popular and industrious members of their staff. He was given a promotion while he was working in the Ponoka branch of the company three months ago, and was moved to Edmonton as branch manager at that time.

Five weeks ago he married and he had been visiting with relatives of his wife with her for a week's holiday before the accident.

No other relatives of the victim could be found. It was stated that he had a sister in Seattle and a brother on this continent. His other kin still reside in Denmark.

Identification of the body was difficult at first. The only means of finding his name was a tag in his suit, which gave his name and the name of the clothiers who supplied it.

Mrs. E. Donaldson, of Montreal, is spending an extended visit with Mrs. P. Swanson, of Lacombe. Mrs. Donaldson and Mrs. Swanston have not seen each other for thirteen years and the re-union will be pleasurable.

LACOMBE AND DISTRICT NEWS

Mrs. Ross McIntosh who has been visiting her parents Mr. and Mrs. D. Hill, has returned to her home in Kirkland, Wash.

Mr. J. Love and family of Cleveland, who has been visiting his mother Mrs. C. Gale has returned to her home.

Mr. George McLean and wife and Mrs. Proudfoot and Jimmie of Edmonton spent the week end with Mrs. J. C. Todd.

Mrs. Stead and Miss Dorothy Stead of Edmonton are spending a few weeks with Mrs. L. B. Chiswell.

Margaret Oleson spent the week-end at Gull Lake.

Mrs. O. Oleson spent Sunday at the Henry home.

Mr. H. Jones, of Morningside and Miss Sadie Cleveland were married on August 16. A host of good wishes go with them on their journey through married life as the bride is a very clever and popular person of the district. For the present they will reside in Morningside.

Mr. E. Cleveland is building a barn for Mr. Price Ward of Birch Lake. Hurry up! Ed, as we are all waiting for a big barn dance.

Mr. and Mrs. L. B. Chiswell gave a dance on the 23rd in honor of their sister Dorothy who was 17 on that date. All had a good time. The music and supper were excellent. Ev. eryone enjoyed themselves and, hope someone else in the family will have a birthday in the near future. Enuf said.

"WHAT PRICE INNOCENCE" AT THE AVALON

A human, moving photodrama that treats of a subject hitherto greeted with lifted eyebrows and shocked, hushed voices, is now on view at the Avalon Theatre, under the pertinent title, "What Price Innocence?"

As a story of modern, pseudo-sophisticated youth. The theme centres about pretty Ruth Harper, 17, and "blessedly innocent," as her doting mother puts it. In love with Tommy, a young rotter, she is bewildered by the strange, overwhelming sensation. Eager to learn, to discover what to do, she is repulsed by a Puritanical mother who just knows that "no daughter of mine would ever do wrong." But tragedy does stalk into little Ruth's life.

Jean Parker, lovely little brunette, is excellent in the role of the tragic little heroine. Minna Gombell is no less impressive in the unsympathetic role of the mother and Willard Mack, the picture's author and director, is truly splendid as the gracious and gentle old family physician.

The theme has been handled with such understanding, delicacy and tact that it emerges as powerful entertainment with no obtrusive preachment or crudely handled situation to mar its quality.

NOTE—no children under 16 admitted to "What Price Innocence."

Coming: Zane Grey's "Lone Cowboy" and Slim Sommerville in "Her First Mate," Aug 30, 31 and Sept. 1.

Marie Dressler in "Tugboat Annie", Monday, Tuesday, Wednesday, Sept. 3, 4 and 5.

JENKINS GROCETERIA LTD.

A CARLOAD OF FRUIT

Arriving FRIDAY MORNING, Aug. 24th

Consisting of 750 cases of Peaches, Prune Plums, Bartlett Pears, Flemish Pears, Crab Apples, Green Tomatoes, Wealthy Apples, Cucumbers, etc., etc. This car is shipped from one of the finest orchards in B.C. noted for quality of high standard.

RIMBEY NEWS

Postal Supt. W. R. Hale, Edmonton, was in Rimbey on Monday on official business.

Mr. and Mrs. O. Massing returned to Rimbey on Sunday evening. Mr. Massing attended the summer session of the University of Alberta.

Miss Audrey Davis and Mr. Charles McNevin who have been visiting during the past week at the McNevin home rcturned on Sunday to Cal.

Considerable road work has been carried out in this part of the municipality. The road south four miles to Symonds school has been widened and graded up to first class condition; the Lockhart road has come in for considerable improvement, and the Rimbey end of the Bentley-Rimbey highway has been straightened out, several sharp turns eliminated and a new bridge authorized for the creek near the Skeels farm.

The districts of Bluffton, Hoadley, Lockhart, Leedale, Fornhee and Rimbey were all well represented at the canoe and speed boat races held at Gull Lake on Sunday.

Miss Lillian McGrath who has been holidaying at Sylvan Lake during the past month returned to Rimbey on Friday.

Miss Eileen Norman of Calgary, has been re-engaged as teacher for the Montgreenan School, twelve miles north of Rimbey.

Miss Alice Wright returned to Rimbey last week after spending several months with her cousin, Mrs. Harris near Ponoka.

The hospital committee of the Woodale W.I. are planning garden party to be held on the lawns of St. Paul's hospital in Rimbey on Wednesday, August 29. Fortune telling, cup reading and various other attractions have been arranged and it is hoped that fair weather will permit the large attendance expected. The proceeds are to be used in the completion of the furnishing of the W.I. ward in the hospital and for other improvements for the institution. Efforts are being made to have as many as possible of the babies who have been born in the hospital to attend the garden party in company with their parents and friends. It is hoped that upon this occasion a group photograph of all these babies may be made and later placed in the main corridor of the building.

An attractive rock fireplace has but recently been built into the east wing of St. Paul's hospital and Messrs. Woolgar of Bentley who did the work are at present constructing artistic rock posts at the base of the concrete steps leading to the front entrance of the hospital. The pillars are similar to miniature light houses and will add considerably to the attractiveness of the grounds.

Mr. and Mrs. S. M. Rimbey spent last week holidaying at Calgary and Banff.

Mr. and Mrs. J. A. Wright, of Edmonton, accompanied by their son Donald and Robert are visiting with relatives in Rimbey.

Mr. and Mrs. C. E. Bowker and son Archie are guests at the W. A. Saunders home this week.

Mr. and Mrs. J. Logan are renewing old acquaintances in Rimbey after an absence of several years. Mr. Logan formerly was C.P.R. agent here.

Nearly seventy neighbors and friends of Dr. Jessie Hellerude gathered at her home on Monday evening to bid farewell before she and the family go to Edmonton where they will join Mr. Hellerude, and expect to make their future home. During the course of the evening Mrs. Hellerude was presented with a friendship quilt, the blocks of which had each been hand embroidered by her friends. A delicious lunch brought the evening to a close.

An addition to the living quarters at the rear of the post office building is under construction. Mr. I. Jones has the work in charge.

Word from Mr. E. George and family who spent the summer motoring through Old Mexico, the U.S.A., and Western Canada, has been received to the effect that they are at present in Calgary and will visit relatives before returning to Rimbey.

Mr. W. J. Cooke was in Edmonton a couple of days this week.

A host of friends and well-wishers gathered on Monday night to charivari Rimbey's latest newlyweds, Mr. and Mrs. Wilfred Marchildon, of the Fuller district. Mrs. Marchildon before her marriage on Tuesday, August 14th, was Miss Lena Damiani. The service was performed by the Rev. Father Murphy, of Rimbey, and Miss Cecilia Marchildon was bridesmaid and Mr. Jerome Marchildon was groomsman. The young couple will reside on the groom's farm west of Rimbey, where Mr. Marchildon is is completing a fine new home.

CATCHES GIANT RAT

Craik, Sask.—What is believed to be one of the largest rats ever found on the prairies was caught by a farmer living seven miles west of here. The rodent was as big as a good-sized cat. It was 15 inches long.

SPARE ALBERTA THIS FOLLY

—Calgary Daily Herald—

The Alberta government is under no compulsion to bring into force the code legislation that was passed last session. If it does so in response to the pressure to which it is now being subjected, it will lay up all sorts of additional troubles for itself and it has surely enough of these on its hands. Of still more importance, it will most prejudicially affect the interests of the province.

The whole hope of an improvement in the position of Alberta rests on a betterment of that of the farmers. Nothing which makes this more difficult should be considered for a moment. But the legislation in question, if it serves the purpose in view, must raise prices on what the farmers have to buy, thus widening the gap between the normal level of these and of what they have to sell.

The bridging of that gap is a first necessity. That the act should have been passed under the regime of a farmer government is astonishing and the ministers by this time should appreciate how serious will be the consequences, for those whom they directly represent, of their proceeding to put the measure into effect.

But it is not the farmers and the general body of consumers who would suffer. Business generally would be demoralized throughout the province. Purchases in other parts of the dominion cannot be prevented and, as home prices rise, sales by outside concerns would inevitably increase. A large number of Alberta merchants, probably the majority of them, realize the danger with which they are confronted. For the government to proceed in the face of their opposition and of that of the consumers, which will become steadily more vigorous, would be a piece of most monumental folly.

The NRA experiment in the United States is responsible for the Alberta proposals. But one must be a very careless newspaper reader if he does not realize how badly that venture is faring across the line. All the original enthusiasm that it evoked has evaporated and its early collapse is being freely predicted. During the first eight months that the NRA was in force there was an advance of 3 per cent. in wholesale and 25 per cent in retail prices. Wages went up by only a small fraction of these per centages. The effort to bring agricultural into keeping with other prices was defeated and national recovery accordingly postponed. It is now realised how necessary it has become to make drastic changes and a Washington dispatch on Saturday told of a reorganization, which is evidently to be a thoroughgoing one, that the president has ordered.

When the experiment in the neighboring country has reached such a crisis, is it any time for Alberta to make one of the same kind? If the American example is to be followed in Canada, certainly this ought to be done on a federal basis, not by a single province. No one ever thought of suggesting that the individual states do what is now proposed in Alberta.

The dominion government has shown no disposition to rush into an NRA scheme of its own. It launched an investigation of Canadian business practices that has been conducted in no half-hearted manner. The information brought out has left no doubt of the urgent need of a complete change in many of these practices and the publicity they have been given has already put an end to or mitigated many of the evils that have been revealed. What further steps the federal authorities will take to prevent the recurrence of these has yet to be determined.

The drafting of such policies as they deem necessary is quite properly waiting upon the completion of the investigation, which is about to be resumed by the commission that has taken the place of the parliamentary committee. Mr. Stevens in recent speeches has made appeals to the business men of the country to set their own houses in order and eliminate all unfair practices, so that restrictive laws may not be necessary. Obviously he is hopeful that these will not be required. In any case, it is wise to wait until more definite conclusions can be drawn from the American experience.

With the effort that is being made, under the leadership of Mr. Stevens, to put Canadian business on a better basis and assure fairer treatment for the rank and file of our people and with the American NRA at so critical a stage, surely there can be no question about the wisdom of doing nothing for the time being at least, towards bringing into force the Alberta legislation.

For the government, of which Mr. Reid has just recently become the head, to plunge the province into the experiment that the legislature authorised would be a most severe blow to the process of recovery in Alberta, which promises to be carried very far during the next few months if no obstacles are placed in its way.

EDMONTON GUNMAN LINKED WITH CARRUTHERS MURDER CASE

Edmoton, Aug. 21—Four hours after his arrest, 20-year-old John Henry Fraser, of Calgary and North Battleford, Sask., was sentenced to two and a half years in Prince Albert penitentiary when he pleaded guilty here today to a charge of armed robbery.

His whereabouts at the time of the murder of Inspector Joe Carruthers of Calgary are also being checked.

Reports indicate that Fraser corresponded with the description of the man whom the city police sought for the murder of the police officer.

Fraser's fingerprints are being checked now.

FLAT LAKE FARMER MURDERED IN OWN HOME

Flat Lake, Alta., Aug. 20—Mike Branchu, about 40 years of age, was shot and killed while in bed at his farm home, four and one-half miles south of here early Monday.

Neighbors who called police from St. Paul early today to the homestead reported children of the slain man as talking about an unidentified man assailant who entered the house on the homestead during the night.

The wife of the slain man is being held by the R.C.M.P. in connection with the murder. According to the R.C.M.P., Mrs. Branchuk said that she had wanted $20 from her husband. He had refused to give her the money until after Tuesday when he would sell some pigs. The woman is said to have related that she thought perhaps he would not give her the money so she killed him.

FARMER RUN OVER AND KILLED AT WETASKIWIN

Wetaskiwin, Aug 21—Henry Sebert Ness was killed almost instantly yesterday on his farm south of Falun, when his team ran away and the big wheel of the binder passed over his chest. He was working under the machine when the hired man hitched the team to the binder, and a few moments later they bolted.

GAS ATTACK ON CATS ROUSES POLICE CHIEF

Hutchinson, Kan.—Tear gas may be fine for routing a bevy of cats engaged in nocturnal vocalizing, but if the wind's in the wrong direction better get yourself a gas mask.

Chief of police B. H. Slayers, his sleep disturbed by a quartet of howling felines, seized a tear gas gun and discharged the weapon in the general direction of the Thomases and Tabbies.

The gas, instead of chasing the cats, rolled back into Chief Slayer's face. The chief was routed from his home and the cats continued their howling.

FISH SWIMS BACKWARDS

Great Barrington, Mass.—Where are you, Bob Ripley? Miss Jane Stine owns a goldfish named Xerxes and like his namesake, the Persian king, he suffered great disaster. The bowl in which Xerxes was swimming fell on the floor and broke. Rescued from the wrecked home, Xerxes was placed in another bowl and since then has been swimming backwards.

CHURCH NOISES HURT BEER PARLOR, CLAIM

Los Angeles.—Beer parlor operators, who chafe under the law requiring them to keep their establishments at least 300 feet from schools, have found a new champion. One of their own number wants a law forbidding churches within 300 feet of beer parlors.

Keeping his identity anonymous he wrote the board of equalization as follows:

"A church has opened next door to my place and the customers of this new business conduct themselves in a loud and undignified manner, singing long and untunefully late into the night, amid shouts and cries. This noise is disrupting business. The church does not pay taxes. I do, and as a law-abiding citizen, I respectfully request protection in this matter."

The board solemnly promised to investigate.

HONESTY APPRECIATED

This week it is our pleasant duty to bring something to the attention of our readers, proving that there is still some honest people left in the world.

"On Tuesday morning we were visited by a woman, who said that during the sports day at Gull Lake on Sunday, her son bought an ice cream cone from the Sports Club booth, and tendered a 'chin-plaster' in payment. The cashier in a hurry making change mistook the bill for one of a dollar and gave the boy ninety-five cents. She returned the ninety-five cents to the Club."

Board and room for students. Reasonable. Apply this office.

Speed Boat Races Draw Record Crowd to Gull Lake

The Speed Boat Trials held at Gull Lake on Sunday, were attended by upward of three thousand people. Cars began to arrive from every direction early in the morning, until by noon there was an estimated total of more than two hundredd autos. The weather was perfect for a sports program such as was put on, the lake remaining as smooth as a mirror until just after the motor boat race was completed.

The Races themselves were interesting to all spectators, though Frank Wynne with his boat "Comet 1" had things pretty much his own way, winning all three heats. The first heat saw him a whole lap ahead of his nearest competitor. In the next two heats Rebk. Lee gave him a better race in Vic Horner's Boat "Grad", coming in just a minute behind. Reg. Whyte of Red Deer, brought his V8 in in all three heats an easy third, while Syd MacDonald of Edmonton driving "Zip" finished fourth. Two entries one from Bill Madge, Edmonton, and one from Costello, Calgary, did not arrive. It was expected that Madge's boat would have proved ample competition to the "Comet" but unfortunately the craft was wrecked while making a trial run at Cooking Lake a week ago.

In the Canoe Canoe Championships, Claude Halpin won first place, defeating Bert Wilson of the Edmonton Voyageurs, in the men's singles, 200 yards. Claude Halpin, also won in the men's standing canoe singles, while Stewart Chapman and Ted Carruthers came first in the standing canoe doubles, with Claude Halpin and Wallace Dalgleish coming second. In the men's canoe doubles, Ken Todd and Ted Carruthers won first place. Next year it is expected that the Regatta will be held around July 1st and the Club has the assurance that the "Edmonton Voyageurs" and "Banff Canoe Clubs" will be down in full strength. The speed boat entries will be much more extensive than at this year's Trials.

The management of the Gull Lake Sports Club deserve congratulations for the way both Thursday's Ball Tournament and Sunday's Regatta were conducted. Starting without a cent in the treasury, the prize money and all other expenses were paid, though it was necessary to pro rate the purse money. The Village of Gull Lake was not asked to contribute to the Sports Fund, and the entire amount was collected from the business men of Gull Lake, Lacombe and Bentley, while the tagging of cars and running of the concession made up the balance.

The expenses for the first day, including prize money, was $168.00 and the money taken in was $169.00, and the Club has their refreshment booth and other odds and ends all paid for and of use another year.

The expenses for the second day amounted to $66.00 for the Speed Boat events, and $10.00 for the canoe events. Other costs included 10 per cent. of the gate receipts that went to the Government Parks Board, about $22.00, not counting the expense of conducting the concession. The total amount taken in was in the neighborhood of $107.00 for Sunday's Regatta.

John Berg, Barney Halpin, John Hembury, Jack Halpin and the boys of "Gish's Gull Lake Orchestra" deserve a lot of credit for putting on this most successful day. Barney Halpin, managing the water sports and chairman of the committee, worked untiringly with little assistance; and it was largely through his efforts that the sports days were possible. Jack Halpin acted as starter for the speed boat events, and with Max Moore acted as race judge. Herb Chandler handled the canoe races, and announced the various events. John Hembury, Ted Carruthers, Mrs. Barney Halpin and Barr Gilmour manned the refreshment booth. The boys of the Orchestra handled the car tagging end of the program, assisted by Harry Halpin and Elgin Thomson.

The Gull Lake Sports Club held a sports day at Aspen Beach on Thursday. Baseball, girl's softball, and races for children were the order of the day.

The number of visitors from outside points was disappointingly low, but despite this fact the holiday dwellers of the town put in a full day of athletics.

The weather was perfect, with a hot sun beating down from the sky that was practically cloudless. Races were held on the beach in the afternoon, while in the forenoon, afternoon and evening two ball diamonds were occupied with contesting teams of baseballers and feminine softballers.

The Lacombe baseball crew slugged their way into the championship of the tournament by defeating Bentley 11-1 in a game that would have done credit to many first-class leagues. Gull Lake won the game against Meadowbrook in the finals.

Gull Lake girls swamped Turville 44-10, and Red Deer girls plastered a 26-10 lacing on Lacombe.

The hard, sandy beach provided a perfect track for the children's races. Nearly a hundred children took part, and the meet was run off with dispatch.

An appeal has been taken against the action of Mr. Justice Ives. With one exception the newspapers of the province have conformed to the rule that comment is not allowable on a case which is still before the courts. The exception is the United Farmer publication.

That is a matter which might properly engage the attention of Hon. Attorney Geuneral Lymburn, whose duty it is to maintain popular respect for the courts of the land. Is it in order that the members of a jury should be thus characterized as "morons, or temporarily blinded by political or personal rancor, or carried away by the influence of mob hysteria"?

Suppose the United Farmer had applied this language to Mr. Justice Ives—would the Attorney General ignore the offence? That hardly seems likely. But are not the members of a jury entitled to the same measure of protection against contemptuous abuse as the presiding judge at a trial? They should be.

Have we come to the place where there is no such thing as contempt of court in Alberta when the offender happens to be the United Farmer publication?

ATTENTION, MR. LYMBURN

The United Farmer, the official U.F.A. publication, continues to express its dissent from the outcome of the MacMillan-Brownlee trial, in its customary language.

In a recent issue the paper informs its readers that "a verdict was given against him (ex-Premier Brownlee) on evidence which no body of fair-minded men who were not either morons, or temporarily blinded by political or personal rancor, or carried away by the influence of mob hysteria, would hang a yellow dog."

An appeal has been taken against the action of Mr. Justice Ives. With one exception the newspapers of the province have conformed to the rule that comment is not allowable on a case which is still before the courts. The exception is the United Farmer publication.

That is a matter which might properly engage the attention of Hon. Attorney Geuneral Lymburn, whose duty it is to maintain popular respect for the courts of the land. Is it in order that the members of a jury should be thus characterized as "morons, or temporarily blinded by political or personal rancor, or carried away by the influence of mob hysteria"?

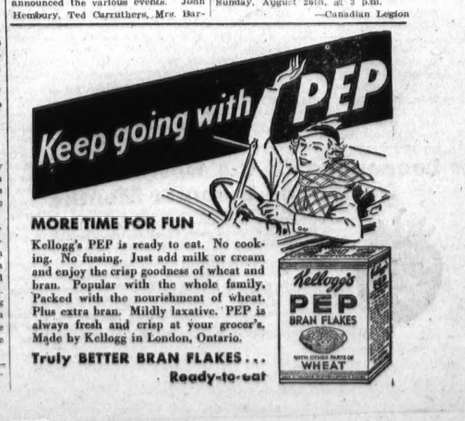

Suppose the United Farmer had applied this language to Mr. Justice Ives—would the Attorney General ignore the offence? That hardly seems likely. But are not the members of a jury entitled to the same measure of protection against contemptuous abuse as the presiding judge at a trial? They should be.

Have we come to the place where there is no such thing as contempt of court in Alberta when the offender happens to be the United Farmer publication?

TO RETURNED MEN

All returned men are cordially invited to attend the Remembrance and Decoration services to be held in the Lest We Forget Memprial Park on Sunday, August 26th, at 3 p.m.

—Canadian Legion

MORE TIME FOR FUN

Kellogg's PEP is ready to eat. No cooking. No fussing. Just add milk or cream and enjoy the crisp goodness of wheat and bran. Popular with the whole family. Packed with the nourishment of wheat. Plus extra bran. Mildly laxative. PEP is always fresh and crisp at your grocer's. Made by Kellogg in London, Ontario.

Truly BETTER BRAN FLAKES... Ready-to-eat

The Leader for Over Forty Years

"SALADA" TEA

"Fresh from the Gardens"

Conscience And The "Talkies"

Hollywood and the motion picture industry have been occupying even more than their accustomed share of the newspaper spotlight during recent months—and to some effect. There are indications the results of inquiry and publicity will have a salutary (if not sanitary) influence upon the product distributed for the entertainment and edification of the theatre-going public.

The tremendous potency of the "Talkies" as agents for popular uplift, perhaps transcending that of the pulpit or the press, has found all too belated recognition in official quarters. Steps should have been taken, years ago, to ensure the influence exerted should be for good, for the elevation, not the debasement, of public taste. Institution of a more direct and rigid censorship at the source of supply now, appears very much like closing the stable door after the horse has been stolen. Much harm has been done already.

Death of Dillinger, who had the unenviable notoriety of being classed as "U.S. Public Enemy No. 1", just as he left a Chicago theatre where a "crime" picture had been shown, came as a somewhat lurid commentary upon the feature of the business which had been engaging public attention. There had been a surfeit of "crime" films—pictures which, despite the anodyne of a little sickly sentiment, had tended to metamorphose the "public enemy" into the "public hero", to throw a romantic glamor around the gangster and his "Moll", to sugarcoat the sordid and the subversive. The morbid and degrading curiosity of the mob which battled for sanguinary souvenirs of the dead Dillinger (the blood-stained garments and bespattered paving stones) can be construed only as a species of hero-worship—a hero worship gone hay-wire, become depraved and distorted.

The "crime" picture had been accompanied by an apparently endless string of "sex" films. It was only right, therefore, and to be expected, that the Dillinger climax to the first should be paralleled by an equally sensational climax in the case of the second. The "sex" series ended in a notorious "morals scandal" trial which occupied the attention of a Hollywood court at the very time police were ending the hectic career of the gangster.

There is no gainsaying that presentation of crime and sex in the average film has been anything but a healthy influence; nor can it be gainsaid that the sole criterion of motion picture production in the past has been box-office receipts. Such a criterion inevitably led to over-emphasis of sensationalism, the featuring of the thrill; and the anodyne of a little moral sentiment has never been applied in sufficient dosage to neutralize the possible evil effects upon impressionable minds of scenes and sounds of doubtful moral quality.

Action finally has been taken to impose a new and stricter censorship upon the film industry, which proposes to expurgate the more harmful features of Hollywood box-office attractions placed in circulation. The censorship will apply not only to the pictures themselves, but also to the stories procured for film purposes.

Concerning the average story submitted and accepted, there apparently is a reason why they should be trite and commonplace both in theme and presentation. Apparently, there is a premium upon the banal. James R. Gregson, noted playwright and actor, has been giving some rather cynical advice upon "How To Write A Talkie" to readers of the Leeds (Eng.) Mercury. He advises aspiring scenario-writers never to try for style, and never to write like a Galsworthy, a Hardy or a Madox Ford; bare-bones and nothing more is wanted. He concludes in this vein:

"Never mind feeling ashamed of the story—send it off at once before your conscience gets going. And as soon as you've sent it off, start on another—on the same one made slightly different. When your first story comes back from the first film company, send them the second and send the first to another firm. When you have about a dozen stories, keep them circulating. Don't hesitate about sending the same people a story which they have once rejected. They have probably changed their reader in the meantime."

Apparently the motto for those who seek this way to wealth is: "Abandon conscience those who wish success".

Receive Big Salaries

Motion Picture Stars Receive More Pay Than U.S. President

The United States motion picture industry, even while suffering a loss of $19,589,393 last year, was shown to have given 110 people larger salaries in 1933 than that received by President Roosevelt.

Three others equalled Mr. Roosevelt in the salary he would have received without his government pay cut—$75,000.

The peak yearly pay cheque for the industry, $315,000, was paid to an unnamed actor. The second highest, a salary of $296,250, went to an "artist" who received $10,000 a week when he or she was working.

These figures were contained in a report of N.R.A.'s six months' study of the producing, distributing and exhibiting branches of the film industry.

Sheep Keep Lawn Clipped

Adopting a method used in London's famous parks, McGill University has turned six sheep out into the playing grounds to keep the grass clipped. The sharp teeth of the peaceful creatures are expected to serve as efficiently and much more cheaply than lawn mowers. Wags have already written to the university suggesting the animals would also provide sheepskins for students' diplomas.

Canada is specifically mentioned in an order issued by the German government respecting the importation of fruit into Germany. All imports from the Dominion must be shipped direct to specified ports and be subject on arrival to inspection for San Jose scale and railroad worms.

University Gets Radium

Was Most Valued Possession Of Late Madame Curie

The late Mme. Marie Curie's most valued possession, a gram of radium purchased for her in 1921 with funds raised by a committee of American women, has been passed on to the University of Paris with the stipulation that her daughter, Irene Curie be permitted to use it at will.

Mrs. William Brown Meloney, chairman of the Marie Curie radium fund, said she received word to this effect.

Mme. Curie's daughter is herself a distinguished physicist, having virtually grown up in her mother's laboratory and serving as her principal assistant for years prior to Mme. Curie's death on July 4.

Mrs. Meloney expressed a belief that the radium constituted the only property of value left by Mme. Curie, with the exception of a meagre bank account, a plot of land in a Paris suburb and personal effects.

Used A New Method

An idea out of which an Edgar Allen Poe might have woven a first rate macabre tale of horror was used by Andy Zodnick, 30, a miner, at Jardine, near Livingston, Mont., to end his life. He blew his heart out with dynamite. Zodnick took a day off from work and went to his bunkhouse after obtaining a stick of the explosive. He placed it against his heart and set off the fuse.

There are approximately 400,000 Christian hymns known in the world.

It is estimated that 10 million bicycles are ridden in Great Britain.

Looseness Of the Bowels During the Summer Months

It is seldom, during the summer, that most people are not troubled with some form of looseness of the bowels. Generally it develops into Diarrhoea, Dysentery or Summer Complaint, and has a tendency to weaken the system.

Do not check the discharges too suddenly.

Do not experiment with a new and untried remedy, but take Dr. Fowler's Extract of Wild Strawberry, a remedy that has been used by thousands of families during the past 88 years.

Do not accept a substitute. Be sure and get "Dr. Fowler's" when you ask for it.

Put up only by The T. Milburn Co., Ltd., Toronto, Ont.

DR. FOWLER'S EXT. OF WILD STRAWBERRY

Freed From Penal Servitude

Convict Kept In Exile On Devil's Island 26 Years

Fifteen years in a cage, like a wild beast, on a tiny island in a tropical climate, with no one to speak to.

Unaware of the World War until four years after it had ended.

Freed through the untiring efforts of his sweetheart during his 26 years of exile.

Such was the experience of ex-Lieutenant Benjamin Ullmo, who has just arrived in Paris, after undergoing 26 years' penal servitude on Devil's Island for having betrayed his country while under the spell of a modern Delilah, known as "La Belle Lison."

The evidence was so strong against him when he was arrested in 1907 that he had the sympathy of no one but his fiancee, Mlle. Blanche Dupuis, who forgave him his association with the "Delilah" of the case and vowed that she would spend her life working for his release.

Many speak of all the French penal settlements as Devil's Isle, but, as a matter of fact this name actually belongs to a particular island reserved for political prisoners.

"Captain Alfred Dreyfus and Ullmo are the only two in recent years who have served their sentences there.

Fifteen years out of his 26 were served by Ullmo on this island. He was kept in a cage-like cell, and even his warders refused to talk to him.

During all this time he was ignorant of what was taking place in the world and was unable to write to or receive letters from his sweetheart. It was not until the end of 1922 that he was transferred to another island, where he learned of the Great War.

Though without an answer to her many letters, Mdlle. Dupuis never ceased her efforts to secure remission of his penalty.

These efforts were unavailing until this year, when, having at last received letters from Ullmo, she pleaded his case to the president of the republic.

Later she received word that a free pardon had been granted to the exile and that he would be returned to France at once.

Recently Ullmo arrived here en route to his native Toulon. "I am dazed by the change in the world," he said. "It will take me years to get accustomed to it. Only one thing is unchanged. It is the love of my faithful sweetheart."

Fortune In Rusty Hulk

Hope To Salvage Klondike Nuggets From Vessel Which Sank 33 Years Ago

Treasure hunters are about to find—so they hope—a reputed $3,000,000 fortune in Klondike nuggets and gold dust which sank with the vessel, Islander, nearly 33 years ago.

The rusty hulk of the ship will be dragged ashore from waters 365 feet deep, salvagers said, and divers and workmen can enter the battered, barnacle-crusted craft in search of safes in which gold was shipped to the States from the rich diggings of the great Klondike field.

It was August 14, 1901, when the Islander, pride of the Canadian Pacific fleet, bearing a gay party of miners who had struck it rich and a heavy consignment of gold, smashed into an iceberg in Steven's Passage.

To-day the divers saw the result—the bow shattered off, the decks crushed, the funnel toppled over, the hulk covered with rust and barnacles. The 1,600-ton craft was grappled deep in the water and hauled laboriously toward shore, in operations never attempted before in salvage history, so far as is known here. The salvage work so far has required two years and cost $500,000.

She is being beached on Admiralty Island. Frank Curtis, Seattle, is in charge of salvage operations.

Army Promotions

War Office Announces Plan To Speed Up Promotions In British Army

Promotion of officers in the British army is to be speeded up, Douglas Hacking, under-secretary to the war office, announced in the House of Commons.

There is now a serious block, particularly in the infantry, caused by the large number of officers in the higher ranks who have not yet reached the retiring age.

Generals will be permitted to retire prematurely, said Mr. Hacking, and a number of infantry officers with the rank of major or captain who were commissioned before January 1, 1919, will be invited to retire on special terms.

With the exception of buckwheat, the grains ground in Canada during May, 1934, were lower than in May last year. The amounts in bushels, with the comparative figures for May last year in brackets, were, wheat, 5,258,707 (5,959,065); oats, 578,306 (621,591); corn, 144,344 (194,404); barley, 47,978 (49,211); buckwheat, 3,808 (2,744), and mixed grain, 726,298 (1,021,874).

If ignorance is bliss some people must be blessed with perpetual happiness.

Hunting coyotes with aeroplanes has become a popular sport in Montana.

INFORMAL PICTURES OF DUKE AND DUCHESS OF MARLBOROUGH

With the recent passing of the Duke of Marlborough at the age of 62, the Marquis of Blandford (left) becomes the tenth Duke. At the right is the new Duchess of Marlborough, photographed at one of the recent important race meets which she attended with the Duke.

Giant Mersey Tunnel

Huge Engineering Feat Is Formally Opened By The King

The world's longest underwater roadway, the giant new Mersey tunnel between Liverpool and Birkinhead, was recently formally opened by the king.

His Majesty pressed a golden switch which rolled back huge green and gold curtains, and formally declared open what has been called the greatest engineering feat of modern times. The tunnel has four lanes for vehicles and broad sidewalks for pedestrians.

"Who can reflect without awe on that will and power of man which in our times has created the noble bridges of the Thames, the Forth and the Sydney harbor, and has driven also tunnels such as this in which many streams of wheeled traffic may run in light and safety below the depth and turbulence of tidal waters bearing the ships of the world."

The tunnel is named the Queensway in honor of the queen.

It was conservatively estimated that more than a million persons were present.

The tunnel has been under construction for nine years. Outside of the actual boring the chief difficulty encountered was that of ventilation. The total cost is estimated at $35,000,000. The tunnel contains a three-mile roadway of special cast-iron sections.

Huge Producer Of Gold

Expect Soviet Output Will Be Second Largest In World

Soviet Russia now ranks as the second largest producer of gold in the world as the result of spectacular output gains in the past two years, the most recent estimates, official and otherwise, indicate.

The 4,000,000 fine ounces of gold which the Soviet Union is expected to produce this year would outstrip both Canada and the United States, long rivals for the position of runner-up to South Africa. Russian output in 1933 is officially placed at 2,489,000 fine ounces by the government, a gain over 1932 of 142 per cent. and more than twice the annual average of Czarist days.

The Soviet government claims to have spent more than 500,000,000 rubles in the last four years on the gold mining industry. Its foreign orders for gold mining machinery have grown visibly. Officials of the Bolshevik regime assert that Russia's gold deposits are well-nigh inexhaustible and that the U.S.S.R. some day will exceed even the Transvaal, richest gold source ever found.

Flour production in Canada for the month of May this year amounted to 1,175,433 barrels, exceeding the amount for the previous month but lower than that for May last year when 1,334,101 barrels were produced.

In his youth, George Washington made a trip to Barbados in the West Indies.

Chance For Canadian Girls

Australian Lacemaker Hopes Someone Will Copy His Designs

"For the instruction of Canadian girls" an Australian lacemaker, William Blacker of Home Creek, Queensland, has sent to Canada a specimen of lace and two handcarved serviette rings. They are in the hands of Col. Wilfrid Bovey, president of the Canadian handicrafts guild, at McGill University.

In the letter which accompanied the specimens, Mr. Blacker explained he learned to knit and to make fishing nets during a long illness in his boyhood, and later used this experience to make lace after an idea of his own. The inspiration for the wood carving, he said, was gained through watching Australian aborigines at their work.

Mr. Blacker complained that very few of the girls with whom he has come in contact in Australia have the necessary proficiency in knitting and net making, and they have not the time to learn; so he fears that his skill in lace making will be lost. Thinking that, because "of the long, cold winters" in Canada, the girls here may be more ready to stay home and knit, he sent samples of his craft and expressed the hope that some Canadian girls "who take an interest in artistic matters may enjoy trying to produce something that will be a novelty."

Scientists Are Puzzled

Striped Tree In California Is Producing Pink Lemons

Pink lemons are being grown in California. They are growing on one tree in a grove which has become a Mecca of astounded scientists who gaze at this phenomenon with awe and periodically and gravely pinch themselves. The skin and fruit of the lemons are a vivid pink, but this is not the only strange feature about the tree. The trunk and branches are striped, while some of the branches are white and others green. The white boughs are quite barren.

Tree Planting Plan

Shelter Belt 100 Miles Wide From Canada To Texas To Be Planted

United States Secretary of Agriculture Henry Wallace announced that work would begin immediately on a $75,000,000 project to plant a forest shelter belt 100 miles wide extending from the Canadian border to Texas.

President Roosevelt in an executive order signed July 11, allocated $15,000,000 of emergency funds to begin work.

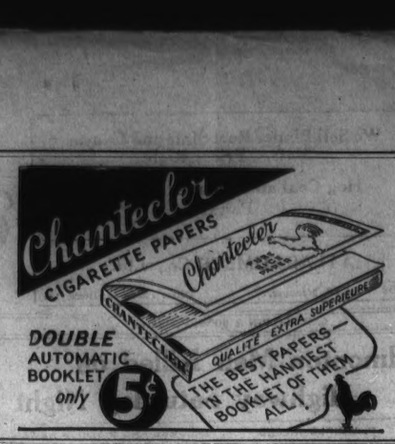

Calchas was the famous prophet of the Greek army before Troy, gifted by Apollo with knowledge of the past and the future.

Some animals of the same species have more ribs than others.

The shortest route from New York to China is over the North Pole.

HUSBAND: "Those people who are too lazy to climb up here don't know what they've missed!" —The Humorist, London.

Well Known "Mountie" Chosen

Corporal Stallworthy Recommended To Shackleton As Weather Expert

When Edward Shackleton, leader of the Oxford University exploration expedition into the Canadian Arctic this summer, asked the Canadian government for an experienced expert on conditions in the frozen wastes of the far north, Corporal F. H. Stallworthy of the R.C.M.P., formerly a constable in Alberta and now at Ottawa, was immediately named.

Famed for his exploits in the lonely Ellesmere Island district, Corp. Stallworthy will accompany the expedition to that territory where it is panned Shackleton will establish the base.

Five years in various parts of the Arctic and his splendid work on the Bache peninsula where, at one time he was marooned for a whole year, have fitted Corp. Stallworthy for this new post he will fill.

Last November, Miss Hilda Austin, daughter of the rector of St. Catherine's church, Edson, married Mr. Stallworthy and during his absence in the north she will remain in England with her husband's parents. The expedition planned the journey into the north from the European side and while in Ellesmere land will make an attempt at reaching the north pole.

Islanders Face Starvation

Clergyman Makes Appeal For Evacuation Of Tristan da Cunha

Tristan da Cunha, the "world's loneliest island," a British possession in the South Atlantic Ocean, has a population of 170 who are reported to be facing starvation. An appeal for the evacuation of the island has been made by Rev. A. G. Partridge, who was the clergyman in charge there from 1929 until last year. The appeal was made in a speech at Southampton.

Mr. Partridge painted this picture of Tristan da Cunha and its population of 170: The inhabitants are all half-caste. They are simple, ignorant and devout, knowing nothing of the world; the climate is cold, the soil poor. Judged by "our standard" the people do not live, they only exist. In ten years' time, with a much-increased population, the island will be faced with starvation.

"The people," said Mr. Partridge, "are being pauperized by misguided people at home who send them such things as silk dresses and gramophones instead of bags of flour which they really need."

Heart Can Be Patched

Amazing Idea Advanced By Doctor In Cleveland

Operations on the heart, especialy in cases of injury, are a necessary development of the future, in the opinion of Dr. Claude S. Beck of Cleveland, who spoke before the surgery section of the American Medical Association's convention there.

"Because the heart is apparently so well protected by the ribs and chest bone, no one thinks that it may be bruised," Dr. Beck said. "The contrary is true."

If the heart is ruptured, he said, it may, in many cases, be sewed together and it is even possible to put a patch on the ruptured spot to reinforce the walls.

Cancer Diagnosis

A new aide in the diagnosis of cancer was claimed in Russia by Professor Tsitovitch in the form of chlorine injections in the blood. Tsitovitch reported that by this method he was able not only to diagnose the disease but also discover persons predisposed to cancer.

Soviets Find Salt Mountain

Described as "an immense dome of salt," a mountain has been discovered by Soviet prospectors in South Tadjukistan, near the Afghan border. It is named Hodzha, is 24,000 feet high, and believed to contain about 30 milliard tons of pure white salt. Mining will be started at once.

"Many a young woman," says Dorothy Dix, "has helped her husband to the top of the ladder." Sure, and then decided to hang the picture elsewhere.

In China wild ginseng, even if inferior, is valued far beyond the cultivated roots.

More than 41,000,000 persons have deposits in Japan's postal savings banks.

To Save Sugar Crop

Flies Brought From Brazil To British Guiana By Air Mail

Three men nearly lost their lives on a journey of 1,500 miles to bring some flies from the interior of Brazil to Georgetown, British Guiana. The flies, it is hoped, will save the chief product of this British colony—the sugar crop. In six special packages the flies have travelled 500 miles down the River Amazon to Para by fast motor launch, and then 1,000 miles by air mail. They have been brought to fight the moth borer, a pest which at present destroys about 20 per cent. of the sugar crop by burrowing through the sweet cone. They are "Amazon flies," and their existence—and partiality for moth borers—was discovered after two years of research by Dr. J. G. Myers, of the Imperial Institute of Entomology. Dr. Myers set out to bring a "force" of these flies with a number of assistants, and has had an adventurous journey. The launch in which he brought the flies down the Amazon had to be carried on a bullock wagon over twenty miles of mountainous country. Once the boat was swamped in rapids, and Dr. Myers and his two chief assistants had a narrow escape from drowning. All the scientific instruments for the expedition were lost. But the flies were saved and, if conditions suit them, they should obliterate the moth borer.

Puzzle Has Been Solved

Japan Bought Scrap Iron For Manufacturers At Home

Several months ago the American jingo press reported that Japanese merchants were buying scrap iron in this country and elsewhere, giving detailed information as to ports of loading and shipping lines. It was conjectured that Japan was using this method to procure cheap iron and steel supplies for the manufacture of war material, and sentimental tears were shed over the fate of good ocean liners like the Baltic and the Megantic, which were reported to have been bought and dismantled for this ignoble purpose.

Since then American agents in Japan have made the amazing discovery that the Nipponese authorities were selling this iron at cost price to manufacturers at home. The secret is out. Tokyo has purchased three-quarters of a million tons of idle shipping abroad for $5,000,000 f.o.b. It will not be long before the old ships return to the American market as $1.25 bicycles, $175 automobiles, $4.50 radios, etc.—New York Post.

Building Activity At Coast

Considerable Construction Work Going On In British Columbia

Considerable activity is noted just now in British Columbia construction circles. Road-surfacing, theatre building and home-building are noted in contracts recently signed, while largest of the enterprises is a new mill of the Great Central Sawmills, Great Central lake, which is being built at Port Alberni. Cost of the plant is estimated at about $400,000, and an average of 500 men will be employed.

An Appropriate Text

Before beginning his sermon one Sunday evening a certain minister said that he was sorry to have to complain about the congregational offertories, but he felt bound to make a protest and an appeal. "In last Sunday's collections," he said, "there were no fewer than six buttons. I hope such a thing will not occur again."

Then turning to the Bible, he announced the text: "Rend your hearts and not your garments!"

Mrs. W.: "You should drop that habit of saying 'By Jove!' What do you know about Jove?"

Mr. W.: "I will if you will stop saying 'The Idea!' What do you know about—" and he suddenly stopped.

Has Plans For Utilization Of Canadian Wheat Surplus By Producing Valuable By-Products

Plans for utilising the Canadian wheat surplus to produce valuable by-products by chemical means are being earnestly considered by a scientist at the Canadian Pulp and Paper Research Institute at McGill University.

Dr. W. Boyd Campbell, consulting physical chemist to the forest products laboratories at the institute, discussed wheat surplus in an interview. He stated that in China, by an ingenious method, scientists had succeeded in producing a valuable substance known as monosodium glutamate from wheat, and added that the surface of the possibilities of converting wheat into more costly products had only been scratched.

"If the Dominion," he said, "were to spend a small fraction of the money it has spent on providing transportation and handling facilities for the Dominion's wheat crop on research for new outlets and new uses of wheat, I believe that the wheat surplus would in time be a forgotten bogey. I would suggest that the Dominion government include in the budget, as a start in the right direction, the sum of $500,000 to be used in this research over a period of five years."

The monsodium glutamate being made in China, of which Chinese have sold between $1,000,000 and $2,000,000 worth annually, was until recently a rare chemical found only in research laboratories in America.

It is used in China and Japan much the same as sugar and salt are used here. It is a condiment used by housewives, restaurants, Buddhists and other vegetarians to impart a meatlike flavor to vegetable diets. As a flavoring agent it is 15 times more powerful than cane sugar and seven times stronger than salt.

Canadian wheat, with its comparatively high content of protein, is the best wheat for manufacture of this condiment, the scientist said. China has been making it for several years and production is shortly to be undertaken on this continent.

As Buddhists regard it against their religion to eat any meat or any food prepared from an animal substance, the condiment has a wide sale in the east. Wheat worth two cents a pound was thus transformed into a substance worth from $2 to $3 per pound.

But this was only scratching the surface. Other uses of the surplus could be developed, Dr. Campbell said. In suggesting $500,000 be spent on research in this direction, he added: "This amount seems small when we consider the millions spent in establishing shipping facilities at Churchill, improvement of St. Lawrence waterways, building elevator terminals, and on creation of extensive transcontinental and branch line railway facilities for facility in the movement of Canada's wheat crop."

Must Run Its Course

Dry Hot Weather Moves In Cycles State Experts

North American farmers, tormented by drought, have plenty of company in their misery.

Southern Russia's crops have been curtailed, leading to assertions and denials in the press of other countries that famine threatens the Soviets.

Central Europe faces seriously reduced yields of feed grains and wheat and rice harvests.

England has suffered in the hottest weather in 41 years. Manchuria's farmlands have escaped the fate of other countries, but Spain and the lower Danubian countries have experienced hot, dry weather.

Ask the experts what the cause is and they answer that no one can explain fully. Dry and wet weather move in cycles, weather bureau men say. The present dry "spell" started about 1930. The hope is expressed that it has about run its course.

Combination Is Better

Soybean And Corn Make Good Feed For Ensilage

The use of the soybean alone for ensilage is not recommended but high quality of feed has been produced by a combination of soybeans and corn, mixed in the proportion of about one part soybeans and three parts corn. The two crops can be grown together or they may be produced separately and mixed at the time of filling the silo. Harvesting will be easier and the mixture better obtained where the two crops are grown separately.

A rosebush, imported from England in 1788 and planted by Abigail Adams, wife of John Adams, second president of the United States, is blooming in Quincy, Mass., for the 146th time.

"I want two boiled eggs, and boil them four minutes exactly; four minutes—you understand."

Waiter—"Yes, sir, I understand. They'll be ready in half a minute."

Early Quebec potatoes appeared on the Montreal market on June 26.

W. N. U. 2057

Prefers Canadian Barley

Good Market In Holland If Price Is Right

Canadian barley is preferred by many in Holland due to its having a softer skin and a whiter flour when ground to be used as a feeding meal, states the Agricultural Department of the Canadian National Railways. Among the other advantages claimed for the Canadian product is its superior germinating power and the lack of odoriferousness noted in many competing varieties. Some buyers are willing to pay a premium for the Canadian barley but price in the Holland market is a governing factor. Imports of Canadian barley into the Netherlands reached its peak in 1929 when Holland took over 41 per cent. of her total imports from Canada, but last year there was no imports of any consequence nor have there been any since the present year began. It is considered there is a bigger market in Holland for Canadian barley if Canadian exporters can meet the factor of price. The Netherlands, being an important livestock raising country with a small domestic production of cereals, is a large importer of all varieties of feeding grains.

Shipping Gold By Air

Reaches Market More Quickly And Starts Earning Interest

The sooner the gold gets to market, the sooner it starts earning interest. This fact is the explanation of an increase by 60 per cent. in the transport of gold by air from Africa to England within the last year.

Approximately three weeks can be saved if bullion from the mines up-country in Africa is sent by air instead of by surface transport. When sent by rail to a coastal port and thence by steamer, the transit time may run into 30 days or more. Sent to the nearest Imperial Airways landing ground, it is in London within a week of being handed in.

PHYLLIS: "They haven't waited. They knew they had no chance if you turned me down."
—The London Opinion.

Royal Air Force

British Force To Be Increased By 500 Machines

The British plans for huge expansion of the Royal Air Force were outlined recently in the House of Commons by Stanley Baldwin, who declared the force would be increased by 41 new squadrons, about 500 machines, to be spread over the next four years.

This increase is additional to the moderate increase already authorized in the current estimates. At present the Royal Air Force has about 890 first-line aircraft. The expansion follows repeated declarations of government leaders that Britain must have an air force equal to any within "striking distance" of these shores.

"Of these 41 squadrons," said Mr. Baldwin, "33 will be allotted to home defence, raising the existing squadrons at home to a total of 75.

"The remaining squadrons will be for service with the fleet air arm, or abroad."

The rate at which this expansion can be carried out in the five years contemplated (including the current year) must depend upon various considerations, including finance, "which I cannot specify now," said the acting government head.

"We hope, however, to so space out the work as not to make an unmanageable addition to the estimates in any one year."

Scoop Weighs Twelve Tons

Huge Machine Moves 500 Tons Of Earth An Hour

The largest electric excavator ever manufactured in Europe is now being erected at Corby, England, for use at the rolling mill plan being constructed for the production of steel tubes.

The excavator is to be used in the fields adjoining the works for stripping to a depth of fifty feet to seventy-five, the soil or overburden which covers the iron ore needed to feed the huge furnaces of the rolling mills. The machine, which is also known as a stripping shovel, is capable of moving some 500 tons of earth an hour. With it earth can be dug, lifted, rotated, and dumped.

The unusual size of the excavator is indicated in the facts that the jib is 100 feet long; the bucket which scoops out the earth weighs twelve tons, has a capacity of nine cubic yards, and is capable of holding a full-size saloon car.

B.C. Plans Action

Unemployment insurance probably will be introduced in British Columbia, in the near future if the Dominion government postpones action on this point, Hon. George M. Weir, British Columbia secretary and minister of education, declared in an address at Vancouver.

Use of seaweed and burnt sponge for treating goiter was known to the ancients, but the fact that iodine was the curative agent was not discovered until 1850.

Predicts All Africa Will Speak English

Statement Made By Sir Ian Hamilton At Rhodes' Scholars' Dinner

Africa without doubt is going to be English-speaking from the Cape to Cairo, declared General Sir Ian Hamilton at the Rhodes' scholars' annual dinner.

"Since the dawn of history the Boers are the first white race to regard Africa as a whole with passionate love and as their own home," said Sir Ian. "Now at last the Boers and British are intermarrying. We know the type of man these marriages will breed, for we have a sample in the late Theodore Roosevelt. There is nothing in Africa to resist the penetration of a race of Roosevelts.

"They will be bilingual at first," Sir Ian added, "but gradually the English Bible, Shakespeare, and films and the British Broadcasting Corporation will put Afrikaans into the background. Cape Town will become the great strategic air, arms and shipping centre of the British Empire."

The warden of New College, H. A. L. Fisher, presided. Gordon Murray, a native of the Transvaal, who is president-elect of the Oxford Union Society, and A. Schlepegrel, secretary of the Union Society and the first German to hold an official position in the organization, were among those present.

Montreal Melons Popular

New York People Pay Big Price For Product

Piqued at seeing his beloved Montreal green nutmeg melon described as a hybrid squash, Robert Brodie, market gardener, 40 years ago sent his best specimen to a New York newspaper editor. It weighed 25 pounds.

The editor wrote it up in a sensational way and since that time the City of New York has bought melons from Montreal in large quantities. Some of these have been listed on hotel and restaurant menus as high as $1.25 per slice.

The exact origin of the Montreal melon is not known, but it dates back to the first English settlers. It is supposed that they crossed melons brought from England with those grown by the Indians. The farmers in the districts surrounding Montreal are carrying on the melon tradition.

Seminole Indians have turned showmen, and tourists in Florida now find the sign "Indian village, admission 15 cents" before small groups of Seminole homes.

Recent reports indicate that rice production even with present low level of prices, is the most valuable of India's crops.

Japan announces that she is China's boss, but after 5,000 years of that sort of thing China can still say "Oh, yeah!"

Treatment Of Prisoners

To Salvage Social Misfits For A Place In Society

Enlightened treatment of prisoners is a crying need in Canada. In other parts of the world it is recognized that persons in detention should be studied and their mental outlook adjusted to circumstances and temperament. Dr. Edward Ryan, late Supervisor of Ontario Mental Hospitals, made an important deliverance on this subject before the Kingston Kiwanis Club. The authority of this utterance is the better seen when it is remembered that Dr. Ryan, with the late Dr. C. K. Clarke, visited mental hospitals in various countries and made a special study of the insane criminal.

Most Canadians will be astonished at Dr. Ryan's revelation of the mental condition of many prison inmates. "When the institution at Guelph was opened some years ago," said Dr. Ryan, "I was directed to examine the psychotic cases at the Kingston Penitentiary. Some 62 patients were pronounced psychotic. Assuming that the psychopaths are in the same proportion here as elsewhere, this would mean that at least one-third of the inmates of Canadian prisons are or were psychopaths or psychotic. This in itself would unanswerably call for the presence of a psychiatrist on the staff of the various institutions. But it is above and beyond all important that the principle of classifications and grading be adopted. The psychiatrist and the psychiatric clinic should occupy the first place in the general advance.

Pursuing this examination of the inmates of prisons further, Dr. Ryan reached this general conclusion, based on the testimony of research workers: "Less than one-half of the prison population is normal, one fourth is feeble-minded, and nearly one-third psychopathic or psychotic."

This surely calls for intelligent treatment, based on world scientific experience, in the effort to salvage social misfits for a place in society where they will not be a menace to their fellow-citizens.—Toronto Globe.

Check Soil Drifting

Alberta May Pass New Regulations For Compulsory Tree Planting

How to get more trees across the face of the country in order to check the high winds, stop drifting of soil, and incidentally beautify the landscape is one of the questions that the Alberta government is now taking up.

New regulations that will compel homesteaded entrants to retain a portion of their land under timber are being considered and may be passed shortly, it was stated by Premier Reid.

It is believed that the passage of regulations requiring homesteaders to keep from 10 to 25 acres in bush and wood-lot on each quarter section of land would have a beneficial effect both in the way of controlling the soil drifting and checking the intensity of the winds.

European Wheat Market

Canadian Trade Commissioner Comments On Conditions

Europe can get along without Canadian wheat and will do so if the spread between the price of it and that from the Argentine and other soft wheat exporting countries is considered too broad.

This was the pessimistic advice brought to Canada by J. C. McGillivray, Canadian trade commissioner to Holland, Switzerland and part of Germany, who returned home for a vacation.

"They want our wheat to improve the quality of their flour," he said, "but they won't take it if they have to pay too much of a premium for it, and as they are the buyers, its their judgment of what is too much that counts," he said.

The worst thing about wisdom is that it can be had only on the instalment plan.

NIGERIAN CHIEFS VISIT ENGLAND FOR FIRST TIME

A happy snapshot of the Sultan of Sokoyo and his Prime Minister, the Waziri of Sokoto, as they enjoy the sea breezes en route to London from Lagos to visit England. Two other chieftains, the Emir of Gwandu and the Emir of Kano, with their cabinet ministers and suites, reached England at the same time to be guests of the British Government.

Canada Was First Country In The World To Institute A Practical System Of Egg Grading

Uptrend In Business

President Beatty Of The C.P.R. Sees More Favorable Outlook

A general uptrend in business conditions in Canada has been noticed in the last year, E. W. Beatty, K.C., chairman and president of the Canadian Pacific Railway, and directors of the company agreed in interviews at Saint John, N.B.

"There has been an increase in practically all departments of traffic over our lines within the last year," Mr. Beatty declared. "The improvements extend over almost the entire Dominion of Canada. Grain is about the only branch of freight traffic which has not showed an increase, but I am hopeful that this year's crop will bring more traffic than that of last year. General freight and passenger business were much better."

Sir Charles Gordon, Montreal director of the C.P.R. and president of the Bank of Montreal, said: "In textile manufacturing six firms throughout Canada are being kept fairly busy at present. It looks, too as though the improvement over last year is going to be lasting. Knitting and silk industries are far ahead of their last year's production."

W. A. Black, a director of the C.P.R. and president of Ogilvie Grain Company, said: "Flour milling in Canada is in a better position now than it was a year ago. The farmers in the prairie provinces have been having a hard time with droughts and grasshoppers, and the crop will fall short of what was originally expected. However, it will likely exceed that of last year. Prices are higher and the growers will obtain considerably more money than in 1933."

Require Delicate Care

Oyster Raising Is No Slip-Shod Business State Experts

Tasteful oysters, a delicacy meticulously prepared by the chef, need just as delicate care in their nurturing, in the opinion of J. J. Cowie of Ottawa, secretary of the Biological Board of Canada. With Dr. A. T. Cameron, chairman of the board, he inspected the Ellerslie station in Prince Edward Island, where research work in the cultivation of oysters is proceeding.

"This station was established in the first place to discover how Malpeque Bay could be restocked with oysters since the bay was denuded of that shell-fish some years ago, and in the second place the work is intended to develop and demonstrate the best oyster growing methods which may be applied in oyster areas throughout eastern Canada," they explained.

"This advice is especially valuable at the present time in connection with the leasing of areas by the department of fisheries," Mr. Cowie said.

Dr. A. H. Needler, the expert in charge of the work, has surveyed hitherto unproductive areas to the east of Malpeque Bay, and under his advice some of these will soon be leased for oyster culture.

This oyster raising business cannot be handled in a slip-shod manner. The tasty shell-fish demand a lot of care and study before they can be harvested in wholesale quantities.

Non-Profitable Producers

Hens Completing Moult By September Should Be Sold

Hens that complete their moult and have a complete set of feathers by September 1 should be sold as non-profitable producers. The hen that has not moulted by mid-September, is still laying eggs and will continue to do so as long as she is permitted to get a full supply of egg-making feed during the shortening days of fall. Natural moult of the best layers comes after October 15 and will last for but a short time, providing the egg laying feeding schedule is maintained through the moulting period. The natural moult of the poor layers comes with the first hot days of summer in June and lasts till fall. The poor layers do not get back to laying till after the late moulters because the poor layer is also a lazy hen and will not eat enough to keep her laying.

Order Has Been Re-Issued

An order governing the importation of fresh fruit into Germany dated 1931 has recently been re-issued. Canada is specifically mentioned and all imports from the Dominion must be shipped direct to specified ports and subject on arrival to inspection for San Jose scale and Railroad Worm.

In Canada and the more northern latitudes and on the tops of mountains, the duration of sunlight during summer is much greater than on the lowlands or in places nearer the equator.

Baseball shoes cost $16.50 a pair. They're made of kangaroo and the average player wears out two pairs of shoes during a single season.

Per capita consumption of eggs in Canada is the highest in the world—approximately 350 a year. In 1933 total consumption amounted to 3,600,000,000. Why is it that Canadians favour eggs so much? One reason, undoubtedly, is that the Dominion is the only country in the world that has a system of egg grading controlled and supervised by the Dominion Department of Agriculture from producer to consumer. Under this system only good eggs are allowed to present themselves to the consumer as companions with the ham or bacon ration or in the thousand or more ways in which eggs are used in the wide range of cooking.

Eggs also constitute an important item in the economic life of the country as a whole, to say nothing of their incomparable merit in many respects from a food point of view. Their marketable value last year, even at the lowest prevailing price for several years, totalled about $30,000,000.

Canada was the first country in the world to institute egg grading in any form. It was introduced in 1918. In that year the Dominion had a substantial surplus of eggs and the British market loomed up as a possible outlet, but other countries were keen competitors. The officials of the Dominion Department of Agriculture decided in order to establish a market standard of quality that all eggs exported to other countries and those shipped from one province to another should be graded as to quality, size and cleanliness and that the grades should be plainly indicated. The introduction of graded eggs on the British market established an enviable reputation for Canadian eggs. Wholesalers, retailers and consumers knew exactly what they were buying. The element of uncertainty as to quality was removed with grading. Such eggs soon began to command a premium over the ungraded product shipped from other countries. The grading regulations were also applied to all eggs imported into Canada. It was not long before other countries followed Canada's lead in regard to egg grading.

Soon after the grading system for export eggs and interprovincial shipments came into effect, farmers began to see that the consumer in an overseas market was prepared to pay a higher price for an assured quality product. The advantages of grading began to be obvious to both producer and consumer. The per capita consumption of eggs in the Dominion was then about 16 dozen annually. By 1923 egg grading regulations were enacted to apply to domestic consumption. The Dominion officials concluded that if such regulations as applied to export eggs were a good thing for the farmer, then he would benefit to a greater extent if the grading regulations were made completely effective from producer to consumer in the home market. The wisdom of this was soon made evident for the per capita consumption in 1924 rose to 25.4 dozen. By 1929 it had risen to 30.05 dozen. At the present time it is between 29 and 30 dozen, the highest average of any country in the world.

There are two sound reasons why the Department of Agriculture has shown so much concern and zeal about graded or quality eggs. First, that they felt that the government has a responsibility in seeing the public obtains pure or good food. It is sound business in public health which embraces several factors. Second, by insisting that eggs are marketed according to quality, the farmer gets the benefit of greater returns and the poultry industry is thus improved.

Quite naturally, the grading of any product does not meet with immediate approval on the part of all producers. The farmer having his eggs graded for the first time may, in fact, feel something approaching resentment. But he soon realizes that grading is of great advantage.

There are 25,000,000 laying hens on the farms of Canada.

Vacation Is Important

Break In Year's Labor Now Considered Essential

Just who was the first wise man who came to the conclusion that a break in the year's labor was necessary in the trying summer months no one can be quite certain, although such a custom dates back many thousands of years, according to those who have been sufficiently interested to delve into the history of the vacation.

Whatever the origination of this period of designated rest may be, its importance in the modern scheme of things leaves no room for argument.

Practically without exception the necessity for a vacation each summer, of some description, has been recognized by employer and employee.—Guelph Mercury.

In the last eight months one company in Britain has sold 52 large air liners.

The sacred monkey of India is called the hoonooman.

Before You Buy ANY Low-Priced Car ASK

Has It Fully-Enclosed Knee-Action?

Chevrolet, exclusively, in the lowest price field has this safer type of KNEE-ACTION—protected against wear and tear, dirt, ice and water. And the smooth, easy, *floating ride* that Chevrolet Knee-Action gives is the climax of a long record of engineering leadership—a jar-proof, bump-proof *glide* that no other low-priced car can equal. Remember, too—Chevrolet is the only car in its class that combines *shock-proof steering* and *balanced weight distribution* with this newest ride!

Has It a Blue-Flame Cylinder Head?

Everybody knows Chevrolet pioneered the idea of using more than four cylinders in a car of low price. And everybody knows, too, that Chevrolet has done more than any other manufacturer in developing the low-priced six. That's why Chevrolet is the *only* car in its class that offers the advantages of *valve-in-head* six-cylinder engine design—plus an exclusive *new* development, the BLUE FLAME cylinder head. This new head gives greater *horsepower*, faster *"pick-up"*, greater *speed* than ever—*using actually LESS gasoline!*

Has It a Body by Fisher? with Built-in No-Draft Ventilation?

No wonder everybody knows the phrase, "Body by Fisher". Because Fisher is the world's largest builder of automobile bodies . . . using far greater quantities of steel, upholstery fabrics and other high-quality materials than *any* other manufacturer. In the low-price field, only Chevrolet has Body by Fisher—the safest, most comfortable, most luxuriously appointed in this class. And only in Chevrolet can you get the advantages of the genuine Fisher *built-in* system of No-Draft Ventilation . . . refined and improved.

Only **ONE** *Car has them* **ALL**

LIKES HIS FORD V8

In a letter to Bob Park, Ford dealer of Lacombe, Henry Howe, who is at present on a trip to Ontario, has the following to say about his New Ford V8. "We averaged over 30 miles per hour, counting all stops for customs, ferries, etc. Got 20 miles per gallon of gas and used no oil at all. Had the same water in the radiator when we got here after crossing 100 miles of desert. Only four cars passed us all the way across and three of them were 1934 Fords. We averaged 50 miles an hour for hundred mile stretches. We covered 2467 miles without one bit of trouble."

JOHN MacFARLANE DEAD

After a long illness, John MacFarlane, for many years resident of Lacombe and Pleasant Valley, died in hospital here on Monday. Mr. MacFarlane was one of our earliest settlers, and the many friends of the family extend their sincerest sympathy to the bereaved. The funeral was held yesterday at Clive.

THANKS

The officers of the Gull Lake Sports Club wish to thank all those who assisted in making the Sports Days a success:

John Hug, Pres.
John Berg, Secy.
Jessie Fernie, Treasurer.
Barney Halpin, Chairman.

IN MEMORIAM

In loving memory of David Albert John Sauve, who was killed in an automobile accident on Aug 24, 1933.
Tonight the stars are gleaming on a lonely silent grave.
Where sleeps in dreamless slumber one we loved but could not save.
No one knows the silent heartache, only those who have lost can tell
Of the grief we bear in silence, for the one we love so well.
Inserted by loving Wife, Mother, Daddy, Brothers and Sisters.

SPEAKMAN AT SPRUCEVILLE

The Marketing Act, the Central Bank Act, and the Bankruptcy Act, were topics of discussion by Alfred Speakman, M.P., Red Deer, in an address at a U.F.A. meeting, held in Spruceville Hall, on Tuesday evening. Nelson Hall, President of the Progressive Local, presided and a keen discussion on the Marketing Act, followed Mr. Speakman's address. This resulted in the passing of a resolution endorsing the principles of the Marketing Act.

TO BE KEPT IN MIND: Congregational Picnic at Aspen Beach on the afternoon and evening of Monday, Sept. 3rd, (Labour Day). Will all those who have cars be so kind as to assist with the transportation, advising either Mr. E. J. Glasgow, Convenor of the Picnic Committee, or the Rector of this AT ONCE.

SIX DEAD IN U.S. STORMS

Chicago,—A toll of six dead, 30 injured and property damage mounting into hundreds of thousands of dollars, was counted today at two widely separated points in Minnesota and Michigan which was raked by wind and rain storms over the week-end.

RIMBEY MAN INJURED

Rimbey—Walter Peabody, farmer residing five miles south and west of Rimbey, had the misfortune to receive serious injury to his eye when a minute piece of steel from a binder, which he was repairing flew off and entered the eyeball.

Dr. J. N. C. Byers was called and recommended the services of eye specialists and Mr. Peabody went to Calgary where Drs. Gunn, Hackney and Shore x-rayed the affected part and found that the steel had pierced the eyeball where it had lodged.

It is feared that the eye has been permanently impaired.

KICK BY HORSE FRACTURES SKULL

Rocky Mountain House, Alta., Aug. 22—Ralph Boles, 16-year-old son of Mr. and Mrs. H. Boles, who farm a mile east of town, suffered a fractured skull this afternoon when kicked by a horse he was harnessing. He was rushed in to Dr. A. C. Greenaway and is now in the local hospital, where he has a fair chance of recovery.

OVERCOME BY FUMES OF GASOLINE

Carbon, Alta., Aug. 22—Falling into three feet of gasoline in a railway tank-car, Harry Pezon of this town, lost his life this morning.

The youth apparently tumbled in to the tank car when he clambered to the top and was overcome by gas fumes.

700 DIE, 60,000 HOMELESS IN MANCHUKUO STORM

Darien, Aug. 21—Seven hundred are dead, 60,000 are without homes, 1,300 houses have been destroyed and 600 junks carried out to sea by a terrific tornado that burst over Antung, one of the chief ports of Manchukuo, it was reported here today.

FARM WOMEN VISIT EXPERIMENTAL STATION

The last Field Day of the Season and what would have otherwise proved to be one of most successful, i.e. the Horticultural Field Day for Womens' Institutes, held Aug. 23nd, was carried on under the handicap of a continuous drizzle of rain. Nevertheless a fair representation attended from Leedale, Centre Valley, Mirror, Sunset, Rimbey, and Lacombe locals. The Constituency President, Mrs. H. Oldring, of Mirror was also present. Weather conditions also necessitated a change in the program at the last moment, but very comfortable and convenient arrangements were made in the commodious garage, where the visitors were both warm and dry for the lecture period, and where hot coffee was served both at noon and and at the close of the program.

A talk on the imperative necessity of shelter belts and windbreaks was given by J. N. D. MacDonald, of the Lacombe Nurseries, who also regretted the wholesale cutting down of the natural tree growth of the Province, which, if continued, will result in the prairies becoming a sand-blown desert.

P. D. Hargreaves of the University, gave full particulars regarding Peonies, their propagation, soil preparation, cultivation, etc.

Hardy perennials suitable for use in flower borders were listed by G. M. Ramsay, Gardener, and in a short visit to the gardens, G. E. DeLong, Assistant Superintendent, F. H. Reed, Supt., and Mr. Ramsay gave short talks on the hedges, roses and flower borders.

Our first carload of mixed fruit to arrive here this fall will be here on Friday. Peaches, Pears, Prunes, etc. Jenkins' Groceteria.

Miss Osborne, matron of Lacombe Hospital, spent a week's holiday at Gull Lake, the guest of Mr. and Mrs. A. M. Campbell.

Smart Waists 95c.

Lace, rayon silks. Waists you will want for all the year wear. Sizes 32 to 40.

Jacquard Towels pr. 48c.

Cross stripes and pastel borders. Quickly drying and soft. About 18 x 36.

Women's Patent Slippers $1.50

Smart boudoir slippers with covered Cuban heels and padded leather soles. Sizes 4 to 7.

Bathing Caps to Clear Half Price 25c.

Helmet shaped caps with strap. Feather patterned on heavy rubber. Black and colors.

Grocery Department

CANTELOUPES—vine ripened, each 10c.
BERRIES: Strawberries, Blackberries and Raspberries. Fresh stock daily.
CHOCOLATE COATED BISCUITS, celophane bag .. 25c.
BARTLETT PEARS, ripe, basket 35c.
TOILET SOAP, 5 cakes 23c.
ECLIPSE JELLY POWDER, fine quality, all flavors 5c.
PRESERVING FRUITS received daily. Quality the best obtainable.

WORLD HAPPENINGS BRIEFLY TOLD

An unusually severe heat wave in France caused the 984-feet Eiffel Tower to stretch eleven inches upward between sunrise and sunset, engineers said.

The total cost of Great Britain's extended air force program up to 1938 will be about $100,000,000, the house of lords was informed by the secretary for air, Lord Londonderry.

France has decided to invite all the nations of the world to take part in a great international exhibition in Paris in 1937. Its estimated cost is $20,000,000.

The British Columbia canned salmon pack during the year ending June 30, 1934, totalled 1,003,929 cases, the Vancouver Merchants' Exchange reported. In the preceding year the pack totalled 850,256 cases.

Hundreds of acres of sugar beets that failed to germinate because of the drouth, have been plowed under by farmers in the Chatham district, according to W. H. Riddle, of the Ontario department of agriculture.

Premier T. D. Pattullo of British Columbia announced that a mountain in Mount Robson Park in British Columbia was named "Mount George Graham" in honor of Rt. Hon. George P. Graham.

Establishment of a free wheat market in the Soviet Union has been announced, and will take effect after delivery of the present harvest. The decision was made in June by the Communist party congress.

Hon. Irene Parlby, U.F.A. member for Alix and minister without portfolio in the provincial cabinet, announced at a U.F.A. constituency convention that she would not stand for nomination again.

Italy has accepted the British government's invitation to engage in conversations prior to the 1935 naval conference, and the Italian delegation will be in London at the end of the summer or the beginning of the fall.

Ramnatch Chawla, the first Indian to make a flight from India to England has started on the first stage of his planned flight around the world. He is going first through Baghdad, Aleppo and Istanbul, travelling eastwards.

Canada's total exports of paper and manufactures of paper during June were $7,277,892. This was lower than in May when the total was $8,074,867, but considerably greater than June of last year when it was $5,988,610.

Good For Making Soap

Silica Black New Chemical Found In Coal Smoke

The black stuff in coal smoke which soils the hands and the collar shows up as a good soap-making chemical, in a discovery just announced.

The discovery is a new chemical called silica black, found by Dr. C. A. Jacobson of West Virginia University and reported to the American Chemical Society. It is made by mixing powdered bituminous coal and powdered diatomite, a form of silica produced millions of years ago by small organisms living in the sea.

Smoke belching from stacks, the report states, is probably largely silica black. But unlike the smoke, the laboratory stuff is both useful and ornamental. Its most surprising quality so far found is that of a catalyst.

The smoke essence replaces nickel and does a better job at converting vegetable oil into soaps and even into edible fats. Both nickel and the "smoke" catalysts are fine powders and cause the vegetable oils to clarify and to harden.

Experiments conducted by Dr. Jackson and Dr. Loring R. Williams indicate that the silica black is useful as a pigment for paints that will resist both acid and rust. Also for printing inks, shoe-blacking, and stove polish. It can form a good "carrier" for insecticides, and be used in wood graining and in leather tinting.

Noted Talking Bird Dead

Provided Amusement For Many Visitors To St. Louis Zoo

Jocko, famous talking Mina, one of the various Oriental starling-like birds, at the St. Louis zoo, is dead from old age.

Jocko amused zoo visitors for six years. His repertoire included the following phrases:

"Hello guy", "Hello Jocko", "How do you like the zoo?" "Anybody home?" and "Boy, how much money you got?"

Jocko appeared in several talking newsreels. He will be replaced by another Mina, which was Jocko's understudy.

Prince George is to present to the Edinburgh Zoo three Hon cubs given to him by the municipality of Lydenburg, Transvaal, during his present visit to South Africa.

The Canadian milling industry provides a market for about 15 million bushels of Canadian grown barley in the manufacture of food products and feeds.

Rulers Of Millions

Native Chiefs From Nigeria Pay Visit To London

Three men who have never seen a paved road, an omnibus or a hall porter and who do not understand a word of English, were plunged into London recently.

They are the Sultan of Sokoto, ruler of 1,369,000 people in the Northwest Nigeria; the Emir of Kano, from the northern provinces of Nigeria, and the Emir of Gwanda, ruler of 286,000 people on the northwestern boundary of Nigeria.

They and their entourage and Sir Offori Atta, the Gold Coast chief, who arrived on the same train, made the most startling spectacle Paddington station has seen for years.

Petunia satin embroidered with blue and yellow flowers, purple with orange, green and red striped trimmings, royal blue, gold brocade, yellow slippers, purple and silver turbans, decorated black and brown, adorned figures of marvellous dignity and sculptured beauty.

The dignity of these men, surrounded by staring English people, in an edifice of smoky stone, glass, taxicabs and trains such as they had never imagined, was superb.

Black, slim giants, with features that would have sent a sculptor into ecstacies, hands as small and slim as a woman's, noble carriage, and a lithe, swinging walk that is poetry in motion, such as no white man could ever hope to achieve.

They had been given woollen socks to help them meet the rigors of our English climate, and some of them liked them so much that they kept them on.

None of the emirs has been outside his own country before.

Praise For Newspapers

Ontario Minister Says Their Difficulties Not Rightly Understood

All the world is not full of critics, who criticize for the sake of criticizing. Rev. Norman McLeod, pastor of the Baptist church in Brampton, Ontario, is an exception. He boldly aligns himself with the comparatively few who have a word of praise where merit and service demand. In a recent Sunday evening sermon, after repeating William Lyon Mackenzie's code in newspaper conduct and affirming his belief that the standard he set up is being substantially maintained by most of our Canadian newspapers to-day, said:

"High as is their code, newspapers of all sorts do not get enough backing by the better elements in any community. There is always plenty of criticism, cancelled subscriptions, but not enough understanding of a newspaper's difficulties, problems and goals. Newspapers, for example, would like to fight the moving picture situation. But, if they did, they would at once be John the Baptists crying in the wilderness and their fare, their income, would certainly be as poor as the locusts and wild honey which fed the forerunner of Christ."

Truly newspapers have their trials, and it is gratifying to hear someone refer to them with a sympathetic word.

Carrying On Work

Daughter Of Madame Curie Continuing Research In Paris

A recent visitor to France told us of meeting, over there, Irene Curie, daughter of Madame Curie, the famous scientist who died recently, and of an interesting chat with her in the laboratory of the Radium Institute of Paris, where she spends many hours daily, working to discover the cause of radio activity in nature . . . a problem she and her mother had been trying to solve together . . .

And she confidently expects to some day be able to tell the world what regulates radio activity and why it works with such clock-like precision . . . and regularity.—Toronto Telegram.

B.C. Marketing Act

Scope Of Legislation Covers Many Industries Of Province

The British Columbia Natural Products Marketing Act has become effective by government proclamation, the scope of the act touching three of the four major primary industries of the province, agriculture, lumbering and fisheries. Minerals only are exempt.

The act may also cover a wide range of secondary products, wholly or partly manufactured, including articles of food or drink.

Under federal and provincial statutes, wide discretionary powers are placed in the hands of the government to regulate marketing within and outside the province.

Laurence de Gusmao, a Brazilian priest, was the recipient of the first aviation patent. It was granted to him by the king of Portugal after the priest had made a successful balloon ascension at Lisbon.

Church steeples are descended from the tower of Babel, architecturally, the ancient idea being to approach heaven as nearly as possible in worship.

The heart of a cockroach extends the full length of its body.

Wheat Champion

Elfros Grower Is Winner At Saskatoon Exhibition

Frank Isaackson, Elfros, Sask., winner of the world's championship at Chicago in 1933, was made wheat champion at Saskatoon industrial exhibition. The sample of Reward wheat shown by Mr. Isaackson is possibly the same as captured the Chicago honor. H. J. Davies of Edfield, a nearby district, was second and Kalman Bacskai, Leask, provincial champion, was third in the Reward class.

In Marquis, C. H. Conn, Aberdeen, had first place with K. Conn of the same district second.

H. G. Newfeld, Codette, who talks of a 40-bushel crop on his farm in the far northeast this year, was the leader in oats, and E. Thompson, Pathlow, won the Speers trophy for the best peck of barley with his six-row sample. H. A. Myers, Vanscoy, led in two-row barley.

Owes Freedom To King

Man Who Hurled Bottle At Royal Car Discharged

A man who hurled a bottle at the king and queen was discharged at police court hearing and, it was believed, had the king to thank for it.

The object was thrown as Their Majesties were motoring to Edinburgh from Harthill. It struck the pavement a few yards behind the royal car.

His Majesty expressed a wish the man be freed, it was understood.

Winnipeg Newspaper Union Fashions

By Ruth Rogers

THE SAILOR "GAL" DRESS A FAVOURITE WITH GROWING DAUGHTER—IT'S SO SMART PRACTICAL

Here's an attractive little model. Little daughter will be so proud to wear it. Don't you think it really lovely? And it's so easily fashioned for a very small outlay. You'll be surprised.

It can be white linen, peasant cotton, pique, lawn, etc. Make the sailor collar, tie and belt of navy blue. A blue leather belt can be worn, if you prefer it.

The tailored sleeves with plaits are especially smart and cool. Similar plaits in the skirt allow plenty of freedom for action.

Another nice idea is to carry it out in nautical blue and white dotted pique with white pique trim.

Style No. 435 is designed for sizes 8, 10, 12 and 14 years. Size 8 requires 2¼ yards of 39-inch material with 1 yard of 39-inch contrasting and 3¼ yards of braid.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Little Journeys In Science

RAYON

(By Gordon H. Guest, M.A.)

Rayon, or artificial silk, which has become in recent years a widely used product, resembles good paper in that it consists of pure cellulose. Four different processes have been perfected for its manufacture, but of these the viscose process is used for over 80 per cent. of the world's rayon production.

High grade bisulphite wood pulp (usually taken from spruce trees), is the starting point for the production of artificial silk. Canada supplies almost 40 per cent. of the world's requirement of wood for this purpose. This material, which consists largely of cellulose, is treated for two hours with a weak solution of caustic soda, which results in the formation of alkali cellulose. Surplus moisture is squeezed out of this alkali cellulose, and the material is then torn to shreds, which are left for 24 hours in a closed vessel.

A liquid known by chemists as carbon disulphide is now added, producing a solution called viscose. This solution is allowed to "ripen" for a day or two, after which it is ready for spinning. This is accomplished by forcing the viscose through fine holes, into a preparation of dilute sulphuric acid. The acid causes the fine jets of liquid to change into threads, which are spun into the material we know as rayon.

This artificial silk is altogether different from the natural product. It lacks the tensile strength of pure silk, but it has a fine appearance, and this combined with its cheapness, has led to it being used extensively either alone or as a mixture with wool or cotton.

When Nature Steps In

U.S. Crop Reduction Program Is Not Needed

Nature, stepping in as an unwelcome assistant to the United States government's crop reducing program, has made it overshoot a goal or two. A survey showed that the figures aimed at in the five major divisions—wheat, cotton, corn, tobacco and hogs—either have been virtually reached or surpassed.

Drought, insects and floods gave the reduction drive a mighty but unwanted shove along its course.

It has become apparent to directors of the plan that some surpluses they regarded as obnoxious a year ago would be needed to avoid shortages this year.

Wheat, the bread grain, averaged 844,812,200 bushels during 1928-32. The government sought to cut that down to 718,090,370. Now the July report indicates a crop of only 483,622,000 bushels.

The cotton program promises to hit the mark closer. The average in 1928-32 was 14,657,000 bales and the farm administration sought to pull it down to 10,460,251 bales. Official indications now point to 10,195,342.

Macaroni products are said to have originated in China and Japan; but the Italians, who were using macaroni in the fourteenth century, learned about it from the Germans.

"Then there was the plumber's daughter who went to church without her bridal veil—"

"Yes, and had to go back for her tulle!"

Nabonidus was the last king of the Chaldean empire.

Fail To Conquer Peak

Mountain Climbers Unable To Scale Heights Of Mount Robson

Once again has the famous pile bearing the name of "Mount Robson" withstood the attempts of daring climbers to reach the peak. This peak, reaching into the clouds 12,972 feet is the highest point in the Canadian Rockies and a few days ago emerged silently victorious, with the assistance of the weather man, in a battle to reach the crown by a party of well known Alpinists.

Alfred E. Roover, of New York City, accompanied by Guide Hans Fuhrer, of Milwaukee, formerly a regular guide at Jasper Park lodge, and Henry Firtch, of Mount Robson, returned recently and reported an unsuccesful attempt to reach the top after a 10-day effort. The party reached the 11,000-foot level but were forced to return owing to snow and other conditions in the upper levels.

Unearth Sea Serpent

Ancient Specimen Is Discovered By Geologists In Alabama

What may be the "daddy" of sea serpents, a mosasaurus, has been unearthed in exploration of the Alabama geological department, Dr. Walter L. B. Jones, state geologist, disclosed recently.

"We have already taken out 10 feet of a 35-foot mosasaurus near West Green, in Greene county, that probably is 70,000,800 years old," Dr. Jones said.

"And in the same county near Eutaw, we have unearthed a two-ton turtle, possibly as old. Both were encased in chalk of the cretacious age."

Recipes For This Week

(By Betty Barclay)

CHEESE-CAKE

¼ cup butter
¾ cup sugar
5 egg yolks (well beaten)
2 teaspoons lemon juice
1 teaspoon lemond rind
1 pound cottage cheese
2 tablespoons cornstarch
½ cup cream
5 egg whites.

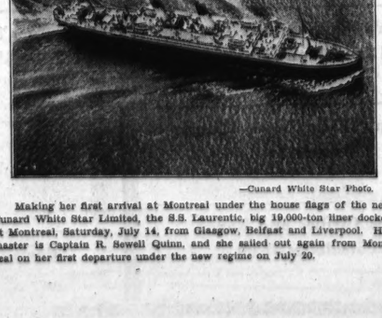

Cream the butter and add the sugar. When thoroughly mixed, add the egg yolks, lemon juice and rind. Beat thoroughly. Put the cottage cheese through a colander or ricer several times until very fine. Add the cornstarch and cream. Combine with the first mixture. Fold in beaten egg whites. Press corn flake pastry in the bottom of a spring form mold. Pour in the cake mixture. Sprinkle top with finely grated almonds, sugar and cinnamon. Bake in a moderate oven (350 degrees F.) until firm, about one hour.

MACEDOINE OF VEGETABLES

2 carrots, cooked and diced
1 cup peas, cooked
1 cup string beans, cooked
1 onion.
½ cup celery, sliced
2 teaspoons sugar
1 tablespoon butter
½ cup meat stock or bouillon
Salt and pepper.

Slice the onion. Fry until soft in the butter. Add the other ingredients. Simmer gently until the vegetables are well heated and the stock is absorbed. Other combinations may be used according to what one has on hand.

NEW CUNARD WHITE STAR LINER

—Cunard White Star Photo.

Making her first arrival at Montreal under the house flags of the new Cunard White Star Limited, the S.S. Laurentic, big 19,000-ton liner docked at Montreal, Saturday, July 14, from Glasgow, Belfast and Liverpool. Her master is Captain R. Sewell Quinn, and she sailed out again from Montreal on her first departure under the new regime on July 20.

An Enviable Record

Swiss Air Liners Operate Twelve Years With No Fatalities

Despite the natural difficulties faced by aviation in Switzerland, a notable record of efficiency has been set in commercial flying in this country.

Since the founding of the first commercial line in 1922, not one fatal accident has occurred on a Swiss line in the transportation of passengers, mail or freight. During this period a total of over 6,000,000 kilometers (3,600,000 miles) have been flown.

The high standard of aviation in Switzerland is credited to a large extent to the ability of the pilots. In the Swissair, the chief air transport company, each of the pilots has had from eight to fifteen years' flying experience. All pilots employed by this organization must pass through the arduous and rigorous school of military aviation and are especially trained in blind flying and landings in the rough country general to Switzerland. Furthermore, the pilots must be trained in the school of acrobatic flying.

On the express line—Zurich to Vienna—reputed to be the fastest in Europe, American aeroplanes are employed. These aeroplanes, because of their performance, have greatly improved the position of American aeronautical products in Europe. The Swissair is so satisfied with the results obtained that it is planning to use American aeroplanes throughout its entire air fleet.

Leaves Legacy To Friend

Timber Merchant Remembers Girl Pal Of Younger Days

A boy and girl friendship which developed into a comradeship which neither time nor separation could break is revealed by the will of John Purvis Dickson, of Grosvenor House, W., London, a timber merchant, who left $431,910.

He bequeathed his jewelry and $75,000 to "my best friend, Lady Fanny Gertrude Hepburn," as well as a tenth of the residue of his property after certain other small bequests have been paid.

The story of the friendship started 40 years ago, when Lady Hepburn, then Miss White Smith, Harry Hepburn, and John Dickson all lived in the same road in a North London suburb. Harry Hepburn was just starting the career which led him to a knighthood. Dickson was still at school at Eastbourne, but all three were great friends. They played golf and cricket together, and attended parties at each other's homes.

Strange Ceremony

Hindu Funeral Of Indian Princess Attracts Attention In England

Amazed villagers of Tooting, England, through a surrounding screen of canvas witnessed an exotic funeral ceremony as the body of the Princess Shumshere Jung, beautiful wife of the Nepalese minister to Britain, wrapped in winding cloths, was burned on a ghat (funeral pyre) built of fragrant wood, Indian oils and butter costing $2,500.

The ashes will be taken to India to be scattered on the sacred Ganges at Benares. Nepal, a forest kingdom in the foothills of the Himalayas to which white men are barred, is credited with full sovereignity by the British government, which was represented at the funeral for which special permits had been granted to allow it to be held according to the ancient Hindu rights.

Better Value For Money

British Postmaster-General Announces New Stamp Issue

Britain is to have new postage stamps this summer. The first announcement of the change was made by Sir Kingsley Wood, postmaster-general.

The main change will be in the preparation and in the appearance of the new stamps. The actual design and size will not be altered, but colors will be deeper.

"They will be better in appearance and quality than the present stamps—better value for the money," said an official of the post office.

The new stamps will be prepared by the photogravure method instead of surface printing.

Butterflies spend the cold winter months in various stages; some go through the winter as eggs, some in the chrysalis stage, some as larvae, and some hibernate in adult form.

The average man considers other men wise only when they come to him for advice.

Agricultural Notes

Interesting Items Gleaned From Many Sources

Cattle can eat poison ivy with impunity but dogs are poisoned by it.

For the past seven weeks, the amount of United States wheat in Canada has been shown as two bushels. On July 6 last year, the amount was 3,950,798 bushels.

In tests for feeding dairy cattle at Montana, it was found that the consumption of hay by growing heifers was increased by diluting molasses and sprinkling over the hay.

With the exception of corn and sugar beets which show increases, there is little change in the acreages of late-sown crops in Canada, according to the preliminary estimate.

The export of Canadian cattle to Great Britain for this year up to July 12 totalled 26,115 head as compared with 23,961 during the corresponding period of last year.

For the first 28 weeks of 1934, ending July 12, the number of hogs graded in Canada was 1,719,796, a decrease of 55,339 compared with the same period of last year.

Butter, raisins and dried currants, wheat and wheat flour are the four Australian products which do not receive the benefits of the British preferential tariff when imported into Canada.

"Handpicked" in the Fruit and Honey Act, 1934, means that, as applied to apples, pears, peaches, apricots, and cherries, they will be considered handpicked unless they show evidence of rough handling or of having been on the ground.

The exporting of approximately a million pounds of Canadian poultry during the last three or four months has had a very beneficial effect on the Canadian market and has opened up an encouraging avenue of trade for subsequent development.—Egg and Poultry Market Review.

The thorn apple, a poisonous weed belonging to the nightshade and potato family, has a variety of names—Jamestown or Jimson weed, stramonium, devil's apple, mad apple, and stinkwort. Canadian Indians speak of it as "the white man's plant". It was introduced into Canada among garden seeds.

Marketings of wheat in the prairie provinces up to June 29, 1934, as compared with the corresponding period of 1932-33, were, figures within brackets being those for 1932-33: Manitoba, 27,753,972, (37,275,275) bushels; Saskatchewan, 106,419,150 (182,339,342) bushels; Alberta, 82,302,217 (140,604,307) bushels.

The methods used by our fathers are frequently held up to us as ideals. Many of these have been verified by scientific study, others have been disproven. I am sure our grandfathers tried to follow the best methods evolved by our forefathers and improve any of doubtful value. It is up to us to do the same. Science endeavours to establish the truth.—J. F. Hockey, Dominion Laboratory of Plant Pathology, Kentville, N.S.

A Unique Donation

How Dr. Grenfell Procured Radium For His Work In Labrador

How Sir Wilfred Grenfell once converted pearls into radium is another of that Labrador physician knight's almost inexhaustible anecdotes, and he told this one as he sailed aboard the steamer New Northland for his forty-something year in bleak Labrador.

"It was in Pittsburg," Sir Wilfred recalled, "and the women there were not only exquisitely gowned but a number of them had long strings of pearls. "Ladies", I said, "if each of you would give me just one pearl from those strings on which there are so many, I could buy some radium and fight cancer at my hospital."

Sir Wilfred said it was agreed. He got the pearls, and bought the radium.

In order to ascertain the suitability of potato flakes as cattle fodder, researches have been made in Germany where potato flakes have been manufactured for a number of years. Based on the feeding value of the product, a conclusion has been reached that they may be used with satisfactory results. Mixed with other feeding stuffs, they are said to be suitable for hogs and poultry.

Had Busy Holiday

During eight hours of liberty a ferret which escaped from its cage at night at a poultry farm in Masefield, England, killed 497 chickens. In its brief holiday it raided 20 poultry houses. When captured it was joyously starting to other adventures.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND

OCCASIONAL WIFE

By

EDNA ROBB WEBSTER

Author of "Joretta", "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. After a party at an exclusive club, when the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Werth calls and persuades Peter to accept a loan of $1,000. Peter finishes his exhibit and asks Avis and Camilla for suggestions as to a name for it. Camilla suggests "Eager Youth," and Avis "Inspiration". Peter adopts the latter title and Camilla, heartsick, goes to Peter's studio for quiet and to think. Peter and Avis follow later, and as the lights are turned on, see the statue has been shattered to pieces. Avis accuses Camilla of doing this, and Camilla, stunned by the disaster, and hurt and horrified by the accusation, faints.

At Camilla's suggestion, Peter enters as his exhibit a statue he had sculptured especially for her as a wedding gift. They named it "Land of Hope".

Camilla's advertising campaign was a success from the beginning and that was arranged to have radio broadcasts, in addition to newspaper advertising. Camilla to both write the Tiny Tots stories and to deliver them over the radio.

Peter's exhibit was awarded the Paris scholarship, and he prepares for his journey to France.

(Now Go On With The Story)

CHAPTER LIV.

That was the shortest two weeks in Camilla's whole life, during which Peter made hasty preparations for going to Paris. He had so many people to see, so many were eager to honor him personally, various duties to attend to, adjustments to make in his routine life, that she couldn't see him half as much as she wished. Her own work, now so involved and multiplied, added to the difficulty; and it seemd to her as if their hours together were only fleeting moments of greetings and farewells, plans and occasional wistful moments of despair over so long a separation.

"Perhaps," she had a sudden idea one day, "if I continue to make so much money and get my work arranged in advance, I can run over to see you for a little vacation in the spring." Her eyes shone with anticipation in the first joyful moment she had known since the beginning of the whole chaotic affair. "Paris is superb in the springtime, darling. Wouldn't that be wonderful?"

"Sure would," he agreed, his own spirits rising. "Well, a six months' sentence instead of a year. That helps some."

To which vague reprieve they clung hopefully, trying to convince themselves that six months really wasn't a long time at all when people were so busy and interested in life as they were. No, six months is not a long time in which to be busy; but it is as a century of time, waiting for love.

Peter moved his most valued possessions into Camilla's apartment. How she would treasure the sight of them in his absence; what poignant memories of their brief association they would recall.

"Having them here will be heaps of comfort," she told him.

"Well, say, if a few pictures and books and things can take my place, there will be no need of my coming back," he attempted to be gay.

She rebuked him lovingly. "Peter, darling, don't you know that everything you have touched and looked at is precious to me? To be where you have been, to touch what your hands have touched—that is something. I do love you so!"

"I know it, precious. But you're not going to be too sobby, now, and make it worse for me, are you?"

"I won't," she promised with a valiant smile which glistened with unshed tears.

"Sorry I can't even hear your voice every few days over the radio. If I had a fortune, I might arrange for a special short-wave hookup from the Eiffel Tower twice a week."

"If you had a fortune, dear foolish thing, I should be going right along with you," she reminded him.

"And leave your own career behind you?" doubtfully.

"My real career is being Mrs. Anson," she told him firmly. "I am only playing at being an artist, an author and a radio speaker while I am waiting for the big opportunity of my life—to share yours!"

"You are sweet to say that," he declared, but he did not believe that she meant it. "Anyway, I am glad you make your debut on the air before I leave. Should you rather I came to the studio with you or listened in somewhere?"

"Find a good radio and listen in. I'd like to think I am just talking to you somewhere, instead of possible thousands. That would make it easier."

"I might listen in with Avis," he observed casually.

Camilla winced, tried not to mind. "I'd rather," she hesitated, "just think of you listening alone, somewhere."

"Okay," he agreed, without affording it much thought. "And if it will do you any good hereafter, I'll tell you that I'll tune you in in Paris twice every week."

She tried to be amused by his banter, but a tremendous weight hung in her breast that his gayer mood could not lift. She assured herself that he was happier only because he was going to his work and ambition, while she already had hers right with her, which made it seem less of an adventure to her. To be sure, she anticipated the expansion of her own work with a vast pride and satisfaction; but just now, Peter's departure was paramount in all her thoughts and plans.

During that fortnight, Avis felt somewhat like an ancient faded canvas, over which someone has painted a gay new picture. After her first disappointment over not being able to tell Peter of his victory, she retired almost completely from his activities. But she resolved that her own hands, with powerful chemicals, would destroy that temporary new painting, and she would again be the prominent masterpiece.

She saw Peter only occasionally as he came and went, but did not intrude into his busy days. After her first display of enthusiasm and compliments, she spoke to him only with quiet encouragement and an impersonal interests in his plans.

"It's going to be frightfully lonely here when you are gone," Avis remarked one afternoon when he had stopped in for a chat. "I may give up the place for the winter. On the other hand, I may get to work in real earnest and accomplish something with which to surprise you when you return. I'll decide about that later, when I see how it goes to miss you. Perhaps in the spring, I'll run over to Paris for a while. Should you be glad to see me?"

"Rather! By spring I'll be trailing every American-looking person I see a block ahead of me, to get a look at his face and see if I can claim his acquaintance—or hers."

"So! I'd be just another American!" she said scornfully.

"Oh, no, not at all. I'll rejoice at the sight of any and all Americans, and just go simply cuckoo at sight of an old friend. Don't be surprised if I kiss you on both cheeks when I greet you, though," he added jovially.

"From impulse or habit?"

"Well, when in Rome—" he reminded her lightly.

"Seriously, though, won't you let me give you a grand party, to celebrate your success and give you a proper send off? I'll have a big dinner party at the house—say fifty or so."

"Please, no!" He recalled the night of her last party in his honor, its tragedy, Camilla's chagrin, Avis' accusation. He wanted to spare Camilla any further humiliation, his time was so limited for being alone with her, and he did not particularly enjoy being feted by Avis' wealthy, idling friends whose compliments he doubted were sincere.

He suspected that they regarded his ambition as a huge joke and his victories as a jolly good excuse for a party with plenty of whoopee and an over-indulgence of liquor. He tried to explain gently. "You've been wonderful, Avis, and I appreciate it. You are making all this a happy possibility for me instead of a wretched struggle. When I come back and do something real—you may celebrate as much as you wish. In the meantime, I am sorry I'll have to delay that work for you and your mother. Perhaps it will be the better, when I do it next year. I should have plenty of new inspiration and my technique improved a lot by that time.

"No doubt of it. The work can wait. What's a year?"

"It depends on how you measure it. Anyway, I wish I might pay you that money before I go, but that's impossible, now."

"I shouldn't take it, if you had it. I dont' want it. I told you I wanted to invest it, and you may have more any time you need it. Will you promise to it me know, and not to let your work suffer for need of money?"

I'll do that, if you say so. But I'm going to try to make what I have do. I'll get something to work at over there to help with expenses. I can't sculp and study all the time, and a little work on the side will be a novelty, a recreation and a balance wheel. I'll need all of them."

"Just see that you don't over do the thing. By the way, I might help you a little there. Do you know anyone in Paris?"

"Not a soul!"

"Then I'll give you a letter to Monsieur Penet, who is a very good friend of mine and will be only too glad to help you find—this balance wheel," she finished with a smile.

"You are too kind," his voice was deep with gratitude.

"Am I? It is so easy to be kind to you, Peter. You are such a marvelous person, yourself."

"There must be something rather good about me to deserve a good friend like you," he returned. "Well, I'll be seein' you again soon. Tomorrow, anyway."

(To Be Continued)

Neglected People

Why Have Historians Overlooked The Wives Of Distinguished Men

One of this year's centenaries that has passed without attracting the attention that it deserves is that of Mrs. Robert Burns. Her chief title to fame is that she was the wife of the author of "The Cotter's Saturday Night" and "Auld Lang Syne," but a contemporary newspaper observed, she "was comely and prepossessing."

Mrs. Burns's real importance, however, is as a symbol. She stands for that army of great men's wives, neglected by the historians and biographers. Almost every trivial versifier in the calendar has been made the subject of some learned monograph. But no one thinks of writing about Mrs. Burns and others like her, of how she kept the children from squalling when her husband was writing, and how she mended his pens, and prevented his losing his manuscripts. Here is practically an untilled field for those who weigh down the publishing lists with oftentimes unwanted biographies. Why cannot the world, for a change, have a series of "Lives" ?

There is Mrs. Shakespeare, for example. Anne Hathaway doubtless had a way with her, but what it was no one knows. In "Twelfth Night" there is perhaps a passing reference to her in the Duke's advice to Viola that a man should marry an elder than himself, but even that is very far from certain.—Christian Science Monitor.

Sees No War Danger

No Immediate Conflict In Sight Is Opinion Of Italy's Premier

Benito Mussolini, premier of Italy, in an interview with Anne O'Hare McCormick, is reported as follows:

"I am no optimist, but I see no immediate danger of war. They are wrong who say the atmosphere today is the same as in 1914. It threatens, certainly. The economic strain is almost unbearable in most countries, but the will to war is absent. On this continent nobody wants war. Let us make sure of ten years of peace and economic reconstruction and many of the present tensions will disappear.

"War cannot be avoided by avoiding facts. Everybody knows that no nation will disarm under present circumstances, that you can never really disarm the strong to the level of the weak, that if others do not disarm, Germany will arm.

"Generally everyone is well aware that the map drawn at Versailles will one day have to be rectified, by war or otherwise. Why not otherwise?"

Wanted Everything

Angela shook her head with finality. "No, Tom, I can never be yours. Sorry," she told her young swain.

He took the blow quite calmly.

"All right," he replied. "What about all my presents?"

"I'll return them, of course," she said coldly.

"Yes, I know you will," he exclaimed with some warmth; "but who's going to return all those cigars I gave your father and the pennies I gave your beastly little brother?"

To Check Slave Trade

Some of the fastest destroyers in the Royal Navy were recently sent to the Red Sea and the Persian Gulf to assist in suppression of the active Arab slave trade, it was revealed in London. Fourteen ships are constantly engaged in checking the slave-trade in that part of the world, the cross-roads between the Orient, Africa and Europe.

According to experimental tests, a dairy cow on full ration requires in the neighbourhood of 30 pounds of dry matter in each 24 hours.

Aviators say that a rainbow seen from the air is not a bow but a circle. So there goes our idea of an air expedition to the end of one.

Celebrates Return Of Riches

Dinner For Twelve Guests Cost Man Small Fortune

A man who has made a fortune out of the gold share boom staged one of the most remarkable dinners ever held in Brighton, England, in the Hotel Metropole.

There were twelve guests and the dinner costs about $250 a head.

When the guests arrived they went to an hotel bedroom on the first floor, and found themselves in a room carpeted with sackcloth and furnished with a deal table, hard wooden chairs, a bare dresser, and a broken-down bedstead.

There the guests assembled and in the flickering light of candles which were stuck into the necks of old beer bottles the guests drank the toast to their host and swapped yarns of old times.

The wine that they drank was poured from an old brown jug. But it was sherry of the rarest vintage.

That was to suggest to the guests the days when the financier was not a millionaire, but was comparatively "down and out".

They called the dinner "The 8.8 Old Boys' Reunion." The man who gave it used to travel up to London from Brighton every day on the 8.8 a.m. train. Now he lives in Park Lane. He has made two fortunes in his life.

The guests walked out of the barely furnished room along a thickly carpeted corridor, down a flight of stairs, to a scene of luxury without parallel in the history of Brighton's hotels.

They sat at a long table and before them was displayed a tableau symbolic of the financier's life story.

On the left was a bag, from which poured a deluge of golden sovereigns —symbolic of his days of wealth. In the middle was a broken-down cottage humbly furnished. On the right was a wonderful villa suggestive of his new wealth.

This was all done in sugar, and was specially executed by the chef.

Special soup brought from China was the first course. "It was birds' nest soup, the most expensive in the world. Hock was served at $25 a bottle. The richest Tokay, an original Green Chartreuse and vodka followed.

To Guide Ships

Radio Beams To Be Used In Making Harbors Safe

Infallible radio beacons utilizing "micro-waves" instead of the beams now broadcast will make it possible for ships to enter the narrowest ports in fog without any danger, Senator Guglielmo Marconi declared before leaving Genoa for London.

The micro-wave system is impervious to interference of all kinds, the inventor declared.

"The experiments are making good progress but we are continuing them until we obtain real and perfect results," Marconi said.

A World's Record

Soviet aviation officials announced that Nikolai Evdokimoff, a Red army aviator, had established a world's record by making a successful parachute jump from a height of 26,575 feet. They announced Evdokimoff opened his parachute only 650 feet above the ground.

Will Be All Scottish

Clydeside Folks Refuse English Sand For Cunard Liner

The new Cunarder now building on the Clyde will not have a mere bathing pool like other big liners, but a real bathing beach. Bathers will walk into the beautiful green water down a stretch of sand, just as they would do at the seaside. Then they can lie on the sands and enjoy artificial sunlight. In every way the environment will be realistic.

Down on the south coast of England, near the mouth of the Thames, is a seaside resort called Margate. It is a place where London "trippers" go by the thousands to spend an odd day, or their annual two weeks with pay. It is strictly the playground of the democracy, but Margate is very proud of itself, and it was just like Margate's impudence to offer to supply the sand for the Cunarder's Lido.

The Clydeside folks immediately waxed indignant. They would hae nane o' that English sand. It had tae be sand frae the banks o' the Clyde or naething.

No doubt the sand will be selected from Rothesay, or Ardrossan, or maybe from Sir Harry Lauder's town of Dunoon. This is a Clyde ship that is going to be the pride of the ocean, and the Thames is not going to be allowed to butt in and steal any of the glory. — St. Thomas Times-Journal.

Curious Floating Islands

Masses Of Water Plants Secured By Poplar Stakes

Near the City of Mexico is the Lake of Xochimilco, nearly covered with floating gardens, called chinampas, on which are raised flowers and vegetables for the city markets. They are formed of floating masses of water plants, covered with soil, and secured by poplar stakes. The latter take root, and surround the islands with living hedges. Among the largest natural floating islands are those formed by tangled masses of trees and brushwood carried down by great rivers. On the Mississippi and its tributaries these islands are known as "rafts." One of the most remarkable of these rafts began forming in the Atchafalaya, one of the lower arms of the Mississippi, in 1778, and gradually increased until by 1816 it had extended to ten miles in length, over six hundred yards in width, and eight feet in depth. Although it rose and fell with the water, it was solid enough to support the growth of trees, some of which were sixty feet in height. This vast obstruction was finally removed by the State of Louisiana at great expense.

A New Fish Story

Australian Native Claims Carp Carried Miles By Storm

It rained fish during a recent storm five miles from Geelong in Victoria, Australia. After the storm small carp, some weighing several ounces, were found in fields at Grovedale, natives claim.

No dam or water supply is close to the field, so it is believed the fish were sucked out of the only lake in the district by a vortex during the storm, and carried five miles in the air before being scattered.

Some fish were found hanging in shrubs and several were impaled on a barbed wire fence.

At the beginning of the World War, aeroplanes could not fly faster than 85 miles an hour, and could climb only 3,500 feet in five minutes; when the war ended, planes could fly 150 miles an hour and climb 6,000 feet in five minutes.

The Greenland whale is one-third head.

Brooms Are Costly Item

Yearly Purchase By British Railways Amounts To $150,000

That "new brooms sweep clean" is appreciated by British railways, for they spend over £30,000 a year on these homely articles. From brooms we slip to soap, dusters, house flannels, scourers, and metal polish. Then there is glasswares, hardware, crockery, cooking utensils, cutlery and plate. There are towels, tablecloths, sponge cloths and linen to be purchased, while acres of carpets, linoleum, upholstery, canvas, and calico provide employment in various industries. One railway spent £44,000 in a year on linen; another £55,000 for sponge cloths and cotton waste in a like period. £10,000 was the bill for a year's soap supply of one company, while £38,000 was spent by another on crockery and glassware. Clothing is another heavy item, for included in the annual requirements are 3,600,000 yards of cloth, 520,000 pairs of trousers, 451,000 jackets, 173,000 overcoats, 250,000 caps, 150,000 ties, and 90,000 pairs of gloves. In the railways' housekeeping bill are items such as £37,000 for carriage upholstery, £35,000 for rope, £19,000 for calico and canvas, and £2,000 for disinfectants.

THE RHYMING OPTIMIST

By Aline Michaelis

HEAVEN FOR TWO

Why should heaven be so vast
And so coldly blue?
It was only (in the past)
Large enough for two!

Heaven now is worlds away,
Shining like a star;
But our heaven of yesterday
Was not cold or far.

Then heaven blessed us at high noon,
Folded us at night;
Stayed with us in glow of June
On through winter's blight.

God, grant paradise once more
Like that heaven we knew,
Shut behind a low, white door,
Large enough for two!

Advocates Gaudy Cars

British Motorist Gives Reason Why Dark Colors Are Dangerous

A scientific reason for abandoning the present black, dark green and other conservative colors of automobile bodies in favor of cars painted bright yellow or bright red or even with still more bizarre combinations such as red and green square or blue and orange stripes has been urged by a British motorist, Capt. W. Llewellyn-Amos, in a letter to the London Times.

The reason is greater visibility and more safety on highways. Convinced by some of his own narrow escapes that dark-colored cars may be extremely difficult to see, Capt. Llewelyn-Amos has changed to a car having a bright yellow body and a black hood. This provides not only average visibility but contrast. Against a light-colored wall the sky or any other light-colored ground, the black hood is conspicuous. At dusk, on badly lighted streets at night or against any dark-colored object the yellow body stands out visibly.

The captain does not claim that this particular yellow and black combination is the only one suitable or even the best one.—Brandon Sun.

Newspaper In The Lead

Nothing Else Takes Its Place As Publicity Medium

Figures of the Bureau of Advertising of the American Newspaper Publishers' Association give some idea of the importance attached to the newspaper as a publicity medium.

More than 61 per cent. of the aggregate advertising appropriations of 351 leading American concerns in 1933, it is pointed out, was spent in newspapers. This figure surpasses by far the 26.9 spent by these firms in magazine space and 12 per cent. on the air.

The combined advertising expenditures of the same companies last year, the report shows, were $113,440,000 in newspapers; $49,898,626 in magazines and $22,368,298 for radio broadcasts.

No doubt the reason why newspapers are well out in front as a go-getter for business is the fact that newspapers are read by everybody whereas magazines and the radio do not carry their appeals to nearly so many potential buyers. Wise business leaders are well aware of this truism.—Kitchener Record.

Timothy blooms relatively earlier in northern areas than in southern. One possible explanation of this, says the Journal of Agricultural Research, is that the development of the plants in the south during early spring is delayed by the relatively short days that occur in southern latitudes, while on the other hand the development in northern regions is hastened by the relatively long days of the late spring and early summer.

In general it may be said that, since Canada's chief market for the sale of agricultural products is the United Kingdom, the amount of foreign competition is limited by Empire trade agreements.

MAKES FALSE TEETH FEEL LIKE NATURAL

There must be a reason Dr. Wernet's Powder is the world's largest seller and prescribed by leading dentists: it holds teeth so firmly—they fit so comfortably —that all day long you forget you ever had false plates. Leaves no colored, gummy paste—keeps mouth sanitary, breath pleasant—the best powder you can buy yet cost is small—any druggist.

Little Helps For This Week

"Let the Lord do that which is good in His sight." 1 Chronicles 19:13.

"Let Thy mercy be upon us O Lord, according as we hope in Thee." Psalm 33:22.

I cannot feel
That all is well when darkening clouds conceal
The shining sun;
But then, I know
He lives and loves; and say, since it is so,
Thy will be done.
—S. G. Browning.

No felt evil or defect becomes divine until it is inevitable; and only when resistance to it is exhausted and hope has fled does surrender cease to be premature. The hardness of our task lies here, that we have to strive against the grievous things of life, while hope remains, as if they were evil, and then when the stroke has fallen to accept them from the hand of God and doubt not that they are good. But to the loving trusting heart all things are possible, and even this change from fullest resistance to complete surrender is realized without struggle.—Martineau.

A Remarkable Operation

Soviet Surgeon Removes Large Tumor From Girl's Brain

What is described as one of the most remarkable operations in medical history was performed at the Leningrad Surgical Institute.

A tumor the size of a pigeon egg was removed from the brain of a young girl. The malignant growth was threatening her with blindness.

The tumor was located only a few millimeters from enucleus where all life centres are located. The surgeon lifted a portion of the brain to remove the tumor.

It is understood that only a few times in medical history has an operation of this character been undertaken successfuly.

Prince Has Sound Views

Heir To British Throne Stresses Value Of Advertising

The Prince of Wales, during a recent address to 800 members of an advertising association, said: "I don't pretend to be an expert, but I have studied the question of salesmanship and advertising, not from statistics, but from many years of travel, not only in this country but throughout the world, hearing for myself and, far more important, seeing for myself. Experience has taught me that, just as unmined gold is valueless, so are articles and manufactured goods hidden away in warehouses and factories useless until they are made known and made desirable by the art of advertising."

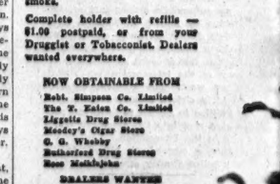

Although Canada has exported 25 to 30 million bushels of oats to the United Kingdom every year, there is a limited outlet for Canadian oats in the world market. World import requirements amount to about 90 million bushels a year—which is the equivalent of less than one-quarter of average Canadian production. In recent years, Europe has supplied about half of her own requirements, leaving a market for about 45 million bushels to be supplied by non-European exporting countries.

An Easier Way

"Where's old Bill been lately? I haven't seen him for months."

"What? Haven't you 'eard? He's got three years for stealin' a car.

"What did he want to steal a car for? Why didn't he buy one an' not pay for it, like a gentleman!"

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile —No Calomel necessary

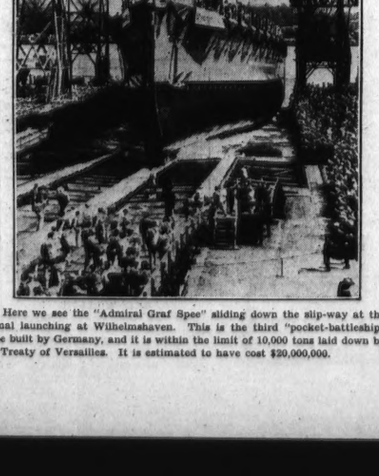

For you to feel healthy and happy, your liver must pour two pounds of liquid bile into your bowels, every day. Without that bile, trouble starts. Foul digestion. Slow elimination. Poisons in the body. General wretchedness.

How can you expect to clear up a situation like this completely with mere bowel-moving salts, oil, mineral water, laxative candy or chewing gum, or roughage? They don't wake up your liver.

You need Carter's Little Liver Pills. Purely vegetable. Safe. Quick and sure results. Ask for them by name. Refuse substitutes. 25c, at all druggists.

GERMANY LAUNCHES ANOTHER POCKET BATTLESHIP

Here we see the "Admiral Graf Spee" sliding down the slip-way at the formal launching at Wilhelmshaven. This is the third "pocket-battleship" to be built by Germany, and it is within the limit of 10,000 tons laid down by the Treaty of Versailles. It is estimated to have cost $20,000,000.

SPRUCEVILLE NEWS

Mr. and Mrs. C. Bruce and niece of Santa Monica, Cal., spent a couple of days with Mr. and Mrs. H. Gottschlich.

Miss Mary Ella and Joshua Biglands of Edmonton, with a few of their friends are spending their holidays with Mr. and Mrs. Joe Biglands.

We are glad to report Harry Southward is able to be around again.

The U.F.W.A. afternoon meeting will be held at the home of Mrs. Bob Boden on Wednesday, Aug. 29. A bulletin will be given by Mrs. R. Burton on "Social and Political Economy". Some of the members who have been away on vacation will give an outline of their trip.

Dr. Hector Hall of Toronto, is visiting his sister and brother, Mrs. P. Young and Mr. Nelson Hall.

Mrs. Art Benson, of Hanna is enjoying a holiday with her parents, Mr. and Mrs. Gottschlich.

ONE KILLED, SEVEN HURT IN CALGARY AUTO CRASH

In a terrific automobile crash early Sunday morning, Mrs. Edith Warren Clemes, of Toronto, daughter of J. J. Warren, President of the Trail Smelting Company was killed and 7 people injured, two of them critically. R. C. Phillips, of Toronto, was charged with manslaughter as a result of the crash.

C. "Pat" Beach, Calgary, employe of provincial department of agriculture was seriously injured sustaining a fracture of pelvis bone, ruptured urethra, severe shock.

A. D. Woodhouse, auto salesman, Edmonton, sustained a fractured nose and severe lacerations of the head. Sever shock. His condition is serious.

Wilfred H. Parrish, grain merchant of Calgary, received severe lacerations of the head, nose; dislocated wrist, shock.

Mrs. W. H. Parish, cuts, bruises, shock.

Miss Christina Strick, school teacher, Calgary. Injuries to foot, shock.

Mr. and Mrs. W. F. G. Adame, Lawrence Lodge, Calgary, bruises and shock.

An automobile driven east on 12th avenue by Robert C. Phillips, automobile dealer, Toronto, crashed into another automobile driven by W. H. Parrish, 2835 Seventh street west, Calgary at the intersection of Eighth street west. The accident occurred at 12:10 o'clock Sunday morning.

Phillips is alleged to have run past a stop sign into the other car which was in the intersection.

Phillips surrendered himself to the city police Sunday afternoon at 2:30.

BANDITS GET $427,000 IN BROOKLYN HOLDUP

Brooklyn, N.Y., Aug. 21—A band of at least a dozen robbers armed with half a dozen sub-machine guns, today held up an armored truck in one of the most daring robberies in Brooklyn police history, and escaped with $427,000.

The robbers cleaned out the truck in three minutes.

WOUND FATAL TO RAILWAY FIRM DOCTOR

Sancohver, Aug. 20—Dr. A. P. Proctor, chief medical officer in Vancouver for the C.P.R., died today as the result of an abdominal bullet wound alleged to have been inflicted on him in his office, August 3, by T. A. Sargood, of Revelstoke, B.C., who now is suffering from a serious bullet wound which police say was self-inflicted.

Sargood, a former C.P.R. locomotive fireman, had suffered from a serious condition of the bones. Dr. Proctor had found him physically unfit to continue at work and this fact, police believe, had preyed on the fireman's mind.

We will allow $2.00 for any old Lamp or Lantern (coal oil or gasoline) on purchase of a New Coleman. See Morrison and Johnston, Ltd.

Mrs. Frank McLear, of Edmonton, was the guest of Mrs. Tees over the week-end.
